About this Guide

Thank you for using StrataSync[™]. This prefix explains how to use this manual to get you up and running with the software as soon as possible.

Purpose and scope

The purpose of this guide is to help you successfully use StrataSync features and capabilities. This guide includes task-based instructions that describe how to install, configure, use, and troubleshoot the StrataSync System. Additionally, this guide provides a complete description of the VIAVI warranty and services, including terms and conditions of the licensing agreement.

Assumptions

This guide is intended for novice, intermediate, and experienced users who want to use the StrataSync System effectively and efficiently. We are assuming that you have basic computer experience and are familiar with basic telecommunication concepts and terminology.

Technical assistance

If you require technical assistance, call 1-844-GO-VIAVI / 1.844.468.4284.

Outside US: +1-855-275-5378

Email: CATVsupport@viavisolutions.com

Introduction

This chapter provides an overview of the StrataSync System and its key features, including the following:

• "About the StrataSync System" on page 14

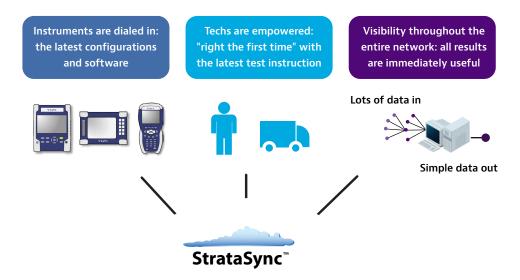

About the StrataSync System

StrataSync is a hosted, cloud-based software application that provides asset, configuration, workflow, and test data management for a wide range of VIAVI Solutions instruments.

StrataSync manages inventory, test results, and performance data anywhere with browserbased ease and improves technician and instrument efficiency.

StrataSync features

- Updates and Options Field personnel operate at maximum capability and efficiency by knowing immediately when firmware upgrades and instrument options are available. They receive proactive, application-aware notifications, and distribution is managed for specific groups or individuals.
- Asset and Configuration Management Enterprise-wide standardized templates to ensure instruments are aligned to a specific configuration. StrataSync lets users monitor and update asset data, modules, configurations, test plans and scripts, templates, and groups, ensuring technicians consistently have the right instrument configurations when performing tests—increasing first-time success rates and reducing repeat rates.
- Test Data Management A common test data repository makes baselining performance practical, and enables the analysis of network trends for proactive maintenance, improved reliability, and customer satisfaction. StrataSync performs file storage, printing, and exporting, and provides clear dashboards and basic reports.
- Workflow Automatically track whether assigned jobs are being completed and their pass/fail status. Results can be viewed per technician, per region, per subcontractor, or however you like.

All without increasing headcount, while also minimizing overall operating cost and unnecessary truck rolls.

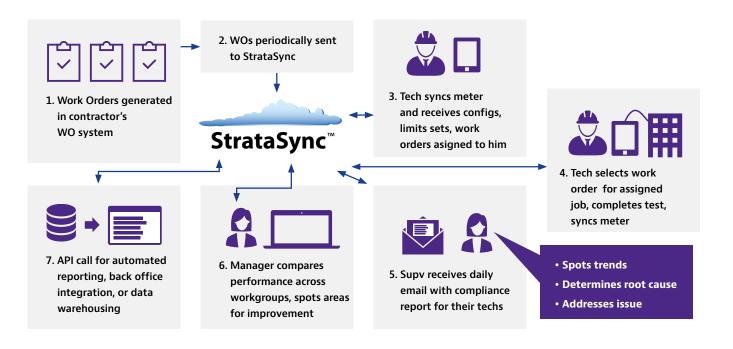

Asset management

StrataSync asset management provides a single, intuitive way to monitor and upgrade assets in the field and office. An administrator can quickly identify out-of-date and underutilized test sets and target updates and the reallocation of assets. With StrataSync, registration identifies which test units are assigned to each technician. StrataSync tracks each test-set sync with the server, making utilization and test practices visible. Post-analysis of compliance and technician activity provides near real-time coaching opportunities.

Upgrades can be applied automatically during the normal work order process, as technicians use their test sets in the field. This dramatically reduces the amount of time spent in the work center determining the fit-for-purpose status of the test set, identifying upgrade requirements, and then manually upgrading the test set.

Test data management

StrataSync collects and stores test data in a central location, enabling viewing and sharing of test data results. Often, data is not centrally collected and its long-term value is underrated. The causes of repeat truck rolls are obscure, and data from previous tests is not available or is not analyzed. With StrataSync, critical plant-performance information is stored in a secure location, enabling proactive problem-area identification. Test data is also accessible via an API to simplify automated retrieval.

Getting Started

This chapter provides steps to get started using StrataSync, including the following:

- "Logging into StrataSync" on page 18
- "Updating your user profile" on page 19
- "Setting up StrataSync" on page 20
- "StrataSync visual overview" on page 21
- "Connecting to StrataSync from the VIAVI Mobile Tech App" on page 23

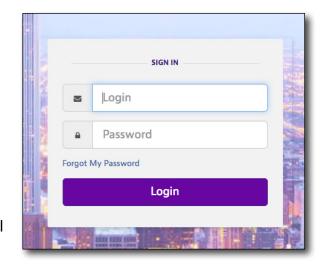

Logging into StrataSync

Welcome to StrataSync! To bring up the StrataSync login screen from your browser, type the IP address or host name for your server and press return.

Your StrataSync Administrator may have already created a browser bookmark and user profile for you.

If you are the administrator, you should have received your login and licensing information from VIAVI when your account was set up.

Enter your Username and Password, then select the **Log In** button. The StrataSync **Main Dashboard** will be displayed.

Note: If you need help logging in, contact your StrataSync Administrator.

StrataSync Main Dashboard

Save button

Updating your user profile

Your StrataSync Administrator should have already created a profile for you. To update your user information, click **User Profile** next to your name in the Main toolbar at the top right of the screen.

If you didn't receive login info, contact your StrataSync Administrator.

User profile

The **User Profile** screen allows you to update your name, email address, tech ID, and contact info.

You can even view your assets and test data from here.

Edit the information as necessary. When done, click **Save** to confirm.

From the **Reset Password** screen, choose whether you want the system to email you the temporary password, or if you want to display it.

When you log in, enter the temporary password, then the new one. Enter it again to confirm.

When done, click **Save** to confirm.

You can also change your password through Preferences. See "Configuration" on page 227

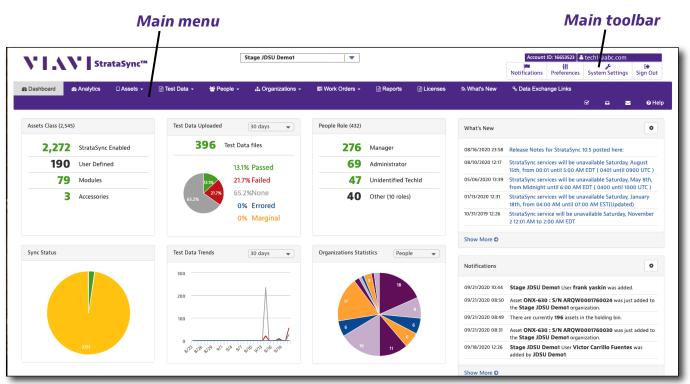

If you need help changing your password, contact your StrataSync Administrator.

Setting up StrataSync

For more detailed information on configuring and managing the system for administrators, see "Configuration" on page 227.

StrataSync visual overview

StrataSync Main Dashboard

Navigation

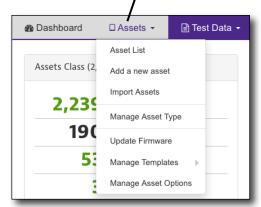

Most of the navigation in the StrataSync System is done through the **Main menu tabs** (purple menu at the top of the screen) and the **Main toolbar** (menu at the top right corner of the screen), as shown above.

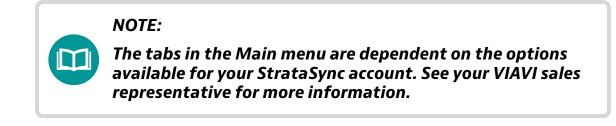

Main menu

Select the tabs within the Main menu to open dropdown menus to navigate between the **Main Dashboard** (home page), **Analytics**, **Assets**, **Test Data**, **People**, **Organizations**, **Work Orders**, **Reports**, **Licenses**, **What's New**, and **Data Exchange Links** screens.

You can also select the icons for **Manage Firmware Versions** \square , **Holding Bin** \square , **Schedule Email** \square , and bring up the **Help** \bigcirc Help section on the far right.

Assets tab and dropdown menu /

Main toolbar

Along the top right side of the screen are several menu items, as shown below.

User Profile					
Account	ID: 16653523 🛛 🖴	tech1@abc.com			
Notifications	¦!ां Preferences	System Settings	€ Sign Out		

Account ID – Shows the enterprise account ID.

User Profile – Shows the current user's profile information, where you can edit the name, email address, tech ID, and contact info.

Notifications 🔎 – Allows you to send a message to your StrataSync administrator.

Preferences H – Allows you to configure your user preferences, including general appearance, language, security, notifications, measurement units, and dashboard settings. See *"Configuration" on page 227*.

System Settings – Allows StrataSync administrators to configure the overall system, including security, asset management, organization, firmware management, and configuration template settings. See "*Configuration*" *on page 227*.

Sign Out 🕩 – Signs out the current user.

Connecting to StrataSync from the VIAVI Mobile Tech App

You can connect to StrataSync using your smartphone or tablet anytime, anywhere using the VIAVI Mobile Tech app.

Mobile Tech supports sync and file management between a wide variety of VIAVI test instruments and StrataSync using an iOS or Android mobile device. The application is available on the App Store and Google Play. See the store app descriptions for a full list of supported devices.

Once your instrument is connected to the Mobile Tech app via Bluetooth, geo location information can be added to reports and files when syncing to StrataSync. If configuration files are set to be deployed from StrataSync to your meter, you can check those here, as well as browsing files from the unit itself.

Once you download the application, log in to StrataSync just as you do on the website. To operate the tests, follow the instructions on the application screens. See the user's guide for your instrument for details on setup and connecting to StrataSync.

Mobile Tech

Instrument-based login for Mobile Tech

Prior to Mobile Tech release 4.2 (and StrataSync release 11.5), a user could either use the VIAVI Mobile Tech application (on either an Apple iOS or Android tablet/phone) in 'Guest' mode (where it acts as a companion app to a VIAVI test instrument for the purposes of sharing files with the instrument and other endpoints, e.g. emailing test results), or a user could use Mobile Tech while logged-in to StrataSync, which additionally supports synchronizing files with a customer's StrataSync account (e.g. workorders, test results, configuration files) and may even support firmware updates. To login to StrataSync with Mobile Tech, a user would need their unique username and password combination, as if they were logging in via the web browser UI.

From Mobile Tech release 4.2 and StrataSync release 11.5 onwards, for compatible instruments (currently NSC-100 and Optimeter), a Mobile Tech user (typically a technician) can login to StrataSync using the connectivity details already provisioned into their VIAVI instrument:

- StrataSync server (US or EU production)
- StrataSync account ID
- StrataSync tech ID

When opening the Mobile Tech app, technicians should choose the "Login with Instrument" option, and then connect to the instrument discovered by the Mobile Tech app.

There are several pre-requisites for this functionality:

- You must have Mobile Tech version 4.2 or later installed on your Apple iOS or Android device.
- The instrument in question may require a firmware upgrade prior to supporting this capability with Mobile Tech and StrataSync – please review the release notes for your instrument to see if it supports this capability, and from which firmware release this was supported.
- The Unique Id of the instrument must be present in the StrataSync customer account. This can be achieved in any one of the following ways:
 - The instrument has been 'Factory-Synced' with/without a techId.
 - The instrument must have synced at least once to the Customer account using the instrument's direct sync method.
 - The instrument details have been added manually using the 'Asset Import' functionality in StrataSync.
 - The instrument details have been added manually using the Assets tab 'Add a new asset' function in StrataSync.
- The user's Tech ID must be present in the StrataSync customer account (it is not required that the instrument is currently associated with this Tech ID).

StrataSync User Guide 22132842

Mobile Tech centralized settings

To help with the consistent configuration of the VIAVI Mobile Tech app across a large fleet of technicians, StrataSync has added centralized Mobile Tech settings for accounts configured for this capability.

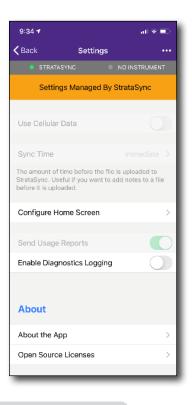

These are configured from the System Settings menu and are applicable for all Mobile Tech users associated with the StrataSync account.

For more information, see "Mobile Tech settings" on page 239.

*	ease Company unti-Thett Reasurement Units sset Management altibration Due Organization Settings "OP Report Limits "imware Management emplate Settings fabile Tech Settings alled Test Notification ob Template Settings	Use Cellular Data Send Usage Reports Enable Diagnostic Logging Sync Time Immediate	
---	--	--	--

When the **Enable Mobile Tech Settings** checkbox is enabled, any user logging into the Mobile Tech app will see the common settings grayed-out and a yellow banner stating "Settings Managed By StrataSync".

Note: This feature requires a StrataSync subscription plan – please contact your VIAVI sales representative to ask about StrataSync licensing if you do not currently have this feature.

NOTE:

You must select the "Login Enabled" checkbox in the user profile under Access and Visibility for this feature to work. See "Editing user details" on page 146.

Mobile Tech Main menu

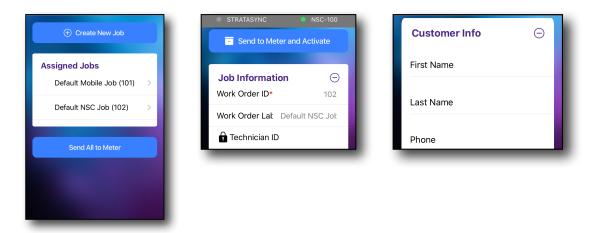

Once you log into StrataSync, you will see the Main menu. Here you can see details of the instrument, sync to StrataSync, manage files on the unit, view documentation, and even contact product support for more information or to request a repair or calibration.

Near the top of the Main menu, you can click **Show more** to see details on your instrument, including all of the installed options.

 Job Manager – Attach jobs to tests, including customer info and work orders, and track test results

• Instrument sync – Sync your instrument to StrataSync and deploy configuration files

 File management – Manage files on the unit that you can save to your phone or tablet. Use the Instrument Files menu to manage files stored on your meter (e.g. ONX-220), use the Mobile Tech Files menu to manage those stored on your mobile device.

• **Remote Display** – Connect directly to the OneExpert remotely to configure your unit and run tests

• **Documentation** – View and download various documentation for your instrument, including applications notes, software release notes, and quick reference guides

StrataSync Basics

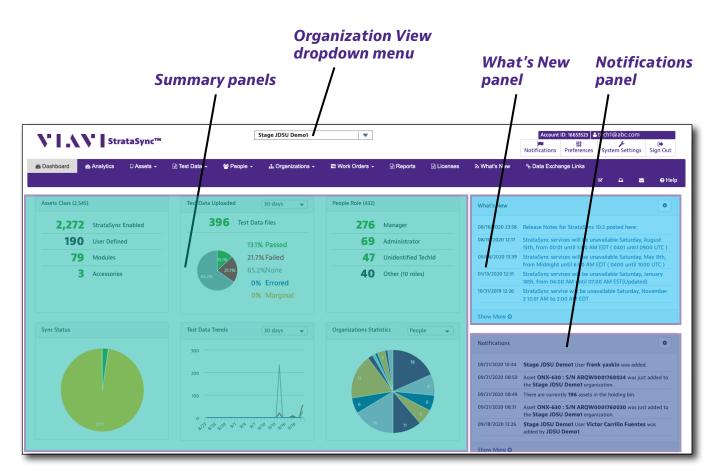

This chapter covers how to use the StrataSync System, including the following:

- "Main Dashboard" on page 30
- "What's New panel" on page 38
- "Notifications panel" on page 39
- "Managing firmware versions" on page 40
- "Holding Bin" on page 42
- "Scheduling emails" on page 45
- "Help" on page 48

Main Dashboard

The **StrataSync Main Dashboard** is the default view that appears after initial login, as shown below. This view provides the overall system status through several configurable summary panels, notifications, and what's new areas.

It also appears after selecting **28** Dashboard from the **Dashboard panel**.

StrataSync Main Dashboard

NOTE:

Your company StrataSync account is shared with other users in your enterprise. Some of the activities and configurations may already be in place.

Check with your StrataSync Administrator and be prepared to coordinate information with other users in your enterprise.

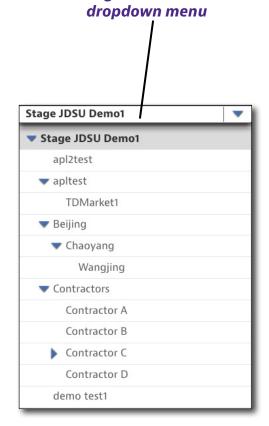

Organization View

Changing the Organization View

You can change what Organization or suborganization view is shown on the dashboard for your StrataSync account from the **Organization View** dropdown at the top of the Main Dashboard.

From here, you can click the arrows to drill down further, including other areas of your organization.

Select the dashboard you want to change to.

Customizing your summary panels

You can choose what summary panels appear on the Main Dashboard.

Select **Preferences** from the Main toolbar and then **Dashboard**. Use the dropdowns to choose from among 13 available panels.

These preferences can be customized for each user.

See "Configuration" on page 227.

Assets Class panel

This panel provides the overall asset counts for the following types: **StrataSync Enabled**, **User Defined**, **Modules**, **and Accessories**.

Select an asset count to show the details for each category in the Assets List.

It is updated in real time. Refresh your browser to get the most recent view.

Assets Status panel

This panel provides the overall asset counts by status for the following: **Active**, **Calibration**, **Repair**, **Loaned**, and **Others**.

Select an asset status to show the details for each category in the Assets List.

It is updated in real time. Refresh your browser to get the most recent view.

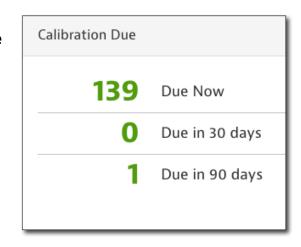

Calibration Due panel

This panel provides calibration status of the "sync-able" assets for the following categories: **Due Now**, **Due in 30 days**, and **Due in 90 days**.

Select a deadline to show the details for each category in the Assets List.

It is updated in real time. Refresh your browser to get the most recent view.

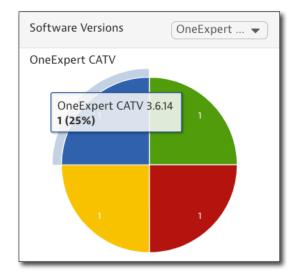

Software Versions panel

This panel provides the software release information for the selected asset type. The asset type can be selected from the dropdown.

Hover your mouse over a version to show a popup with more detail, including the version and percentage installed.

Select an area of the graph to show the details for each category in the Assets List.

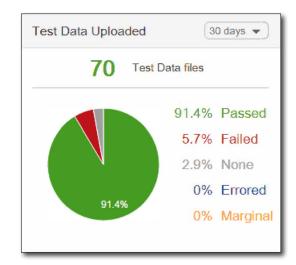

It is updated in real time. Refresh your browser to get the most recent view.

Test Data Uploaded panel

This panel provides the overall test result percentages for the selected duration, including the following categories.

- **Passed** Tests ran with Passed completion status
- **Failed** Tests ran with Failed completion status
- **None** Tests ran without a pass fail threshold
- **Errored** An error occurred during the test and the results may be invalid
- Marginal Tests ran with Marginal completion status

Use the dropdown to select the duration: 7, 14, or 30 days.

Select a percentage to show the details for each category in the Test Data List.

It is updated once per day (e.g. 2 a.m. EST for US Production, 2 a.m. CET for EU Production).

NOTE:

Times shown in StrataSync correspond to your local time zone, no matter where the device was synced from. Upload times are listed, not when tests were run.

Test Statistics panel

This panel provides the statistics of the tests completed by technicians for the selected period, including: **Average per Day**, **Average** % Failed per day, and **Average tests / users/** day.

Use the dropdown to select the duration: **7**, **14**, or **30** days.

It is updated once per day (e.g. 2 a.m. EST for US Production, 2 a.m. CET for EU Production).

Test Data Statis	tics 30 days 🗸
2.3	Average per day
5.7	Avg. % Failed per day
0.5	Avg. tests / users / day

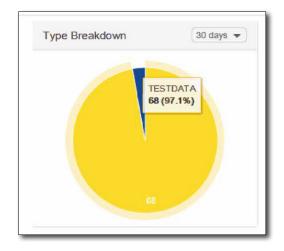

Test Type Breakdown panel

This panel provides the statistics of the type of tests completed by technicians for the selected period.

Use the dropdown to select the duration: **7**, **14**, or **30** days.

Select a percentage to show the details for each category in the Test Data List.

It is updated once per day (e.g. 2 a.m. EST for US Production, 2 a.m. CET for EU Production).

People Role panel

This panel provides the overall user counts for the defined roles in the system.

Select a role to show the details for each category in the People List.

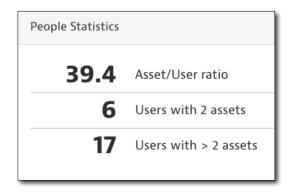

It is updated in real time. Refresh your browser to get the most recent view.

People Statistics panel

This panel provides information about the assets to users ratio and the number of assets per user in the system.

It is updated in real time. Refresh your browser to get the most recent view.

Svnc Status

Sync Status panel

This panel provides the overall asset sync status counts, including the following categories:

- **OK** Assets were successfully synchronized with StrataSync
- **Failed** Assets were not able to synchronize with StrataSync
- **Upgrade Needed** A software update is available for the assets
- Sync Needed Updates, such as pending template deployments, are available for the assets.

Select a percentage to show the details for each category in the Asset List.

Top Performers panel

This panel provides the pass and fail statistics completed by technicians for the selected period, including: **Highest Pass to Fail Ratio**, **Most Passed Tests**, and **Most Failed Tests**.

Use the dropdown to select the duration: **7**, **14**, or **30** days.

It is updated once per day (e.g. 2 a.m. EST for US Production, 2 a.m. CET for EU Production).

Test Data Trends panel

This panel provides a graphical view of the test results trends, including the following categories: **Passed**, **Failed**, **No status**, and **Errored** for the selected period.

Use the dropdown to select the duration: **7**, **14**, or **30** days.

Select a line on the graph to show the details for each category in the Test Data List.

It is updated once per day (e.g. 2 a.m. EST for US Production, 2 a.m. CET for EU Production).

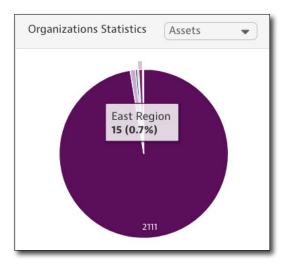

Organizations Statistics panel

This panel provides the overall asset and people counts that are assigned to the selected organization.

Use the dropdown to select **Assets** or **People**.

Hover your mouse over an area of the graph to show a popup with more detail.

It is updated in real time. Refresh your browser to get the most recent view.

What's New panel

This panel provides application events and announcements per your preference settings.

The available types of what's new categories are set up by your StrataSync Administrator.

Select **Show More** to bring up the full view with filtering capability for the type of events.

To change your subscriptions for this

panel, select the gear button 🌞 to bring up the **Preferences** screen, then select **What's New**.

You can also subscribe to email notifications for new posts by selecting the checkbox at the bottom of the screen.

Managing firmware versions

If you have been set up to manage firmware versions for your assets, you can manage them right from the Main toolbar. This must be enabled in System Settings. See *"Firmware management" on page 237.*

Firmware management allows you to limit the enterprise/account visibility of new firmware releases that are generally available from StrataSync. This design allows for testing and approval of the firmware before it is deployed to the entire field.

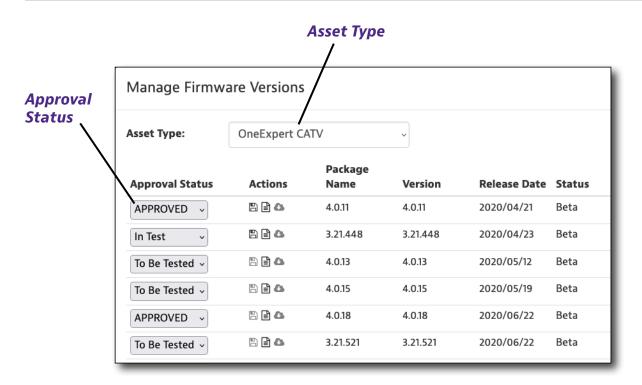

- 1. Select Manage Firmware Versions 🗹 from the Main toolbar.
- 2. From the Manage Firmware Versions screen, select the asset type from the dropdown, and then use the **Approval Status** dropdowns to change the status for each version of firmware you want to update. Use the arrow buttons at the bottom if there are multiple versions.

There are three options for approval status: **To Be Tested, APPROVED**, and **In Test**.

- Firmware versions with the **To Be Tested** status cannot be deployed to instruments in StrataSync.
- Firmware versions with the **APPROVED** status can be deployed to instruments by StrataSync users with a role that has the **Update Firmware** permission granted.
- Firmware versions with the **In Test** status can be deployed to instruments by StrataSync users with a role that has the *Firmware Tester* permission granted.

After selecting the desired approval status, select **Save** to change the approval status.

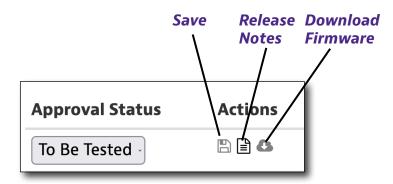

Actions

From the Manage Firmware Versions screen, you can save the approval status, download release notes, and download the firmware itself.

In the Actions column, select Save, Release Notes, or Download Firmware.

Holding Bin

The **Holding Bin** provides a list of assets that have been synchronized to StrataSync for the first time at the factory.

When a new asset is synced and added to the system, it is placed in the holding bin until it is assigned to a user.

If you have permissions, assets can be moved from the holding bin and made active by assigning them to users.

Select **Holding Bin** 🖸 from the Main toolbar.

StrataSync Holding Bin in the Assets List

Moving assets from the Holding Bin

In order to move an asset from the holding bin to the organization inventory, the asset needs to be assigned to a user.

You can either create a new user or assign to an existing one.

We'll discuss how to create a new user more in "*People*" on page 137, but for now, select the **People** tab and then *Add User to* get started.

Assign to mo

Assigning an asset

If you have permissions to manage assets, you can assign assets to a user or yourself.

- 1. From the **Holding Bin**, select an asset (or assets) by clicking the checkbox to the left of the item.
- 2. Right-click the item (or use the **Action** dropdown) and select the **Reassign**. The Reassign Asset screen appears.

Schedule Email

Scheduling emails

The **Schedule Email** feature allows you to receive periodic emails from StrataSync of various lists, including assets, users, licenses, options, and test data.

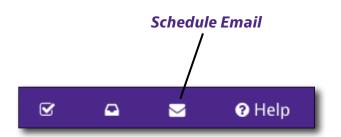

You can set up to be notified for any updates to

the list and choose the frequency for distribution, but only one list can be included for each email.

Select **Schedule Email** Select **Schedule Email** from the Main toolbar.

From the Scheduled Emails screen, select **Schedule Email**. The Views screen is displayed.

SCHEDUL	ED EMAILS

VIAVI	User Guide Quick Start Guide (English) Quick Start Guide (German) Documentation Release Notes

Analytics

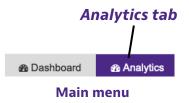

This chapter covers how to use the Analytics features of StrataSync, including the following:

- "Analytics" on page 50
- "Searching" on page 58
- "Sorting" on page 58
- "Views" on page 59
- "Exporting files" on page 60
- "Saving dashboards" on page 61

Analytics

The **Analytics** tab includes optional **Fiber**, **5G**, **Optimeter**, **CATV**, **and Generic Work Order Dashboard** information for instruments in the field if configured for your StrataSync account.

Click the **Analytics** tab in the Main menu to bring up the Analytics Dashboard, then use the filter panel on the left to choose the desired dashboard.

Note: This feature requires the StrataSync ANALYTICS subscription plan at a minimum.

Fiber Dashboard

By default, the **Fiber Dashboard** supports viewing OTDR test results from VIAVI test instruments aggregated according to the organizations configured in the StrataSync account, or by the 'contractorld' indicated in the received test results (e.g. when receiving test results from multiple subcontractors during fiber construction rollout).

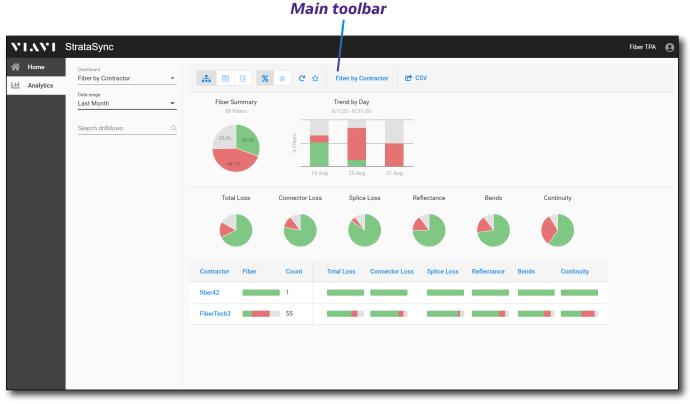

The dashboard utilizes an independent set of pass/fail threshold criteria applied to the measurements such as total loss, connector loss, splice loss and reflectance, instead of relying on exact pass/fail criteria used during the test. This threshold set can be customized according to a customer's needs via professional services.

Fiber OTDR test results and Continuity verification are displayed per-Fiber, and aggregated by Cable ID, Location A and Location B (as well as either by Organization or Contractor), and according to the selected relative or absolute date window. Customers can choose to drilldown through the results in a hierarchical view (with summarized pass/fail per-category), or in a tabular or rollup view per-fiber. An overall fiber summary is always displayed, along with a 'trend-by' chart and key metric pie summaries according to the currently selected drill-down category and level. Additionally, a generic search capability and CSV export function are provided.

The tabs in the Main menu are dependent on the options available for your StrataSync account. See your VIAVI sales representative for more information. This dashboard allows customers to visually track the progress of fiber testing over time, as well as analyze the quality of key metrics by location and contractor so that root causes of issues can be found and performance/quality optimized.

Along with test results, this dashboard can process work order events (creates, updates, deletes). This enables true work order (job) completion progress analysis as the KPI/ Analytics framework has access to work orders as they are created and deployed, not just when work order-associated test results are uploaded.

Fiber Dashboard

5G Dashboard

The **5G Dashboard** allows you to view closeout reports and testing results in the field using the ONA-800 cable analyzer. This includes, per-cell site results, termination type details, trace metrics related to cable return loss, and Distance To Fault (DTF) length.

Along with test results, this dashboard can process work order events (creates, updates, deletes). This enables true work order (job) completion progress analysis as the KPI/ Analytics framework has access to work orders as they are created and deployed, not just when work order-associated test results are uploaded.

5G Dashboard

Optimeter Dashboard

By default, the **Optimeter Dashboard** supports viewing Optimeter test results aggregated according to the organizations configured in the StrataSync account, and the 'techld' indicated in the received test results. The dashboard displays and aggregates pass/fail indicators based on the criteria used during the test.

Optimeter test results are displayed per-Tech ID and may be aggregated by the organization hierarchy defined for the customer account. The timeline for the results is according to the selected relative or absolute date window. Customers can choose to drill-down through the results in a hierarchical view (with summarized pass/fail per-Tech ID), or in a tabular view per-test. An overall summary is always displayed, along with a 'trend-by' chart. Additionally, a generic search capability and CSV/PDF export function are provided.

This dashboard allows customers to visually track the progress of PON testing over time across their technicians, as well as analyze the key metrics so that root causes of issues can be found and performance/quality optimized. For instance, as well as displaying the overall outcome of the test, failures can be distinguished between power levels, faults found, appropriate fiber length and whether the splitter was detected.

This dashboard works best in an overall Test Process Automation solution, whereby PON service activation test workorders are automatically provided to StrataSync, e.g. via StrataSync's Workflow JSON API. This effectively removes the issues associated with poor or no data entry in the field for customer identification, technician IDs and test configuration selection.

Along with test results, this dashboard can process work order events (creates, updates, deletes). This enables true work order (job) completion progress analysis as the KPI/ Analytics framework has access to work orders as they are created and deployed, not just when work order-associated test results are uploaded.

Optimeter Dashboard

CATV Dashboards

The CATV Dashboards allow you to view closeout reports and testing results in the field using the ONX-6xx (ONX CATV) instruments.

Along with test results, this dashboard can process work order events (creates, updates, deletes). This enables true work order (job) completion progress analysis as the KPI/ Analytics framework has access to work orders as they are created and deployed, not just when work order-associated test results are uploaded.

OneCheck Expert

The first dashboard "OneCheck Expert" is designed to visualize aggregated test results of type onecheckexpert.json, typically used by maintenance technicians when troubleshooting CATV connections. As well as summarizing Pass/Fail/Marginal test status overall and by time, the dashboard also breaks down results status by key metric type, so administrators can examine if there are specific issues in particular areas or with specific technicians.

The principle aggregation level is at whatever organization levels have been configured for the customer account, and then the second level of drill-down shows results pertechnician. Clicking on a technician will then show a tabular view showing test results with pass/fail/marginal status per-metric, including values for specific metrics like Downstream and Upstream Throughput in Mbps.

OneCheck Expert Dashboard

OneCheck Work Order Summary

The next two dashboards focus on onecheck.json test results typically used by home technicians. The first dashboard "OneCheck Work Order Summary" summarizes pass/fail status by workorder and over time, as well as breaking down the aggregations by tests by location, e.g. at the Tap, Ground Block or CPE locations.

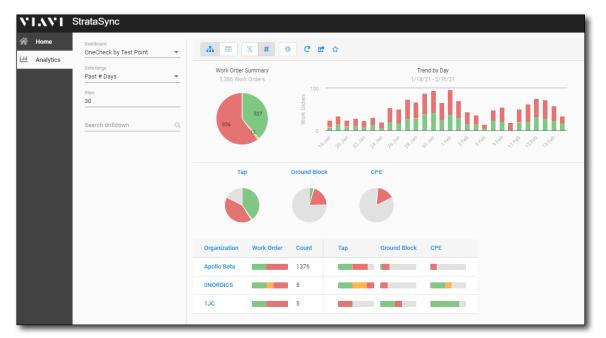

The tabular view starts by further breaking down the results by organization, then clicking on an organization will give a breakdown by technician, and finally clicking on a specific technician will break out the test results per-workorder with per-test location pass/fail status and links back to the original test results files stored in StrataSync.

OneCheck Work Order Summary Dashboard

OneCheck by Test Point

The third dashboard "OneCheck by Test Point" is more test result-focused, as opposed to workorder-focused like the OneCheck Work Order Summary dashboard. As well as summarizing test results overall and over time, and by test location, the user can additionally click on the blue text for the specific location (Tap, Ground Block, or CPE) to filter on test results across organizations and technicians for that location.

OneCheck by Test Point Dashboard

In the example below, the user drilled-down on the 'CPE' location, which then modifies the view to show detailed metrics for results taken at the CPE. Users can then drill-down by organization and technician as with the previous dashboards.

Dashboard OneCheck by Test Point	. .	0 C C	☆

Work Orders + Org Path Dashboard

This view highlights the overall pass/fail status for workorder-associated test results, as well as showing a column chart of results over time, based on the 'Date range' selected in the filter section. The tabular section below by default highlights a breakdown by Organization Path as configured for the StrataSync account. Please note that results association may be duplicated for higher-level organizations.

By clicking on any organization path in the tabular section, you can drill down to the pertechnician pass/fail results. Clicking on a specific technician (by Tech ID), will drill down to pass/fail results by Work Order ID. Clicking on a specific Work Order ID will provide a breakdown per-test type, and finally clicking on a particular test type will display the filename, sync time, test time and pass/fail status for individual test results for that test type. Additionally users can link to the actual test results file stored in StrataSync.

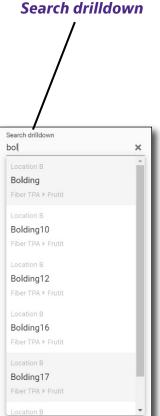

For test results to be included in this dashboard, they must have the Work Order ID field populated.

Along with test results, this dashboard can process work order events (creates, updates, deletes). This enables true work order (job) completion progress analysis as the KPI/ Analytics framework has access to work orders as they are created and deployed, not just when work order-associated test results are uploaded.

Searching

You can search by typing into the **Search drilldown** in the panel on the right. The list updates with the results. Clicking on one of the options will take you straight to that level in the hierarchy

Drilling down provides quick access to any level of the aggregation hierarchy, regardless of which level you have drilled down to. It is especially useful at the highest aggregation level, when you know exactly what you want to drill down to, whether it is a cell site ID or a fiber location.

Sorting

You can also easily sort the columns using the **Columns** help section on the left.

This details multiple column sorting, column resizing, column reordering, column pinning and column hiding features. Saving the view as a favorite (star icon in the header) will preserve all column settings applied.

- Click column header to sort
- Shift-click column headers to sort on multiple columns
- Drag right column border to resize
- Drag column left or right to reorder
- Drag column to the header far left to pin
- Drag column up and out of the header to hide

Reset all

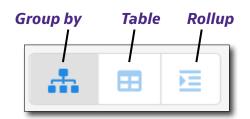

Views

Several options in the Main toolbar allow you to select the data for the dashboard.

View options

The configured view options are found at the top of the screen:

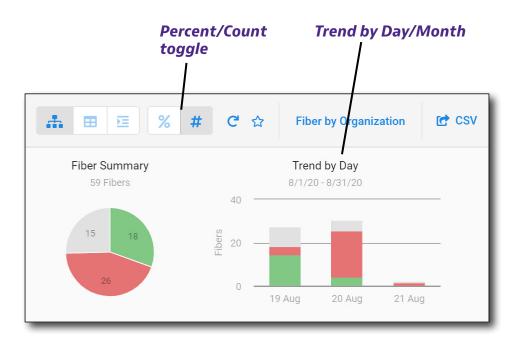

- Group by Top-level aggregation object (e.g. organization)
- **Table** Commonly aggregated object (e.g. 'Fiber' or 'Site')
- Rollup Tabular drilldown view

Trend by Day/Month

By default, the **Trend by Day/Month** chart shows % pass/fail/incomplete over time, either by day (if the date range is a month or less), or by month (if the data range is greater than a month).

You can also select the **#** button in the Main toolbar to toggle counts-per-day/month.

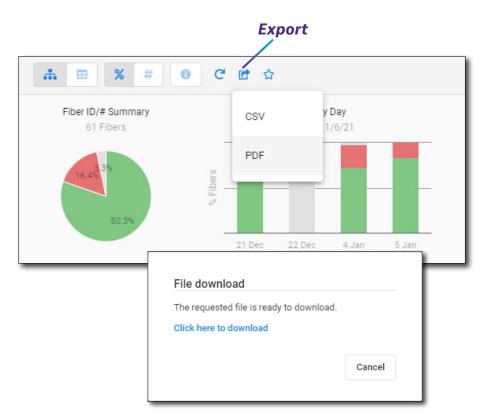

Exporting files

You can export a CSV or PDF file containing detailed measurements as filtered by the current drilldown hierarchy.

Select **Export** and then choose **CSV** or **PDF** from the dropdown. The PDF option, unlike CSV export, provides the same graphical view as shown in the browser, whereas the CSV export is meant to support downloading the tabular metrics for further offline processing.

After clicking **PDF**, the **Export** button is replaced with a spinning busy wheel. Once the PDF is ready, a file download popup box appears to save to your desktop.

CSV file detail

Saving dashboards

You can save the dashboard drilldown hierarchy to bring up at any time. This useful is you want to have different view options (e.g. Table vs Rollup) and date ranges.

Select the **Star** in the Main toolbar. A pop-up comes up so you can name the dashboard, then select **OK**.

Viewing dashboards

Your dashboards are saved to the **Home** tab. Select it to see the **Quick Links** dashboards you have saved.

To remove a dashboard, select the one you want to remove, then select the **Star** in the Main toolbar to remove. A pop-up will ask you to confirm, select **OK**.

Assets

This chapter covers how to use the Asset Management features of StrataSync, including the following:

- "Assets" on page 64
- "Searching and sorting" on page 65
- "Views" on page 68
- "Asset List" on page 71
- "Adding new assets" on page 88
- "Importing assets" on page 89
- "Managing asset types" on page 91
- "Updating firmware" on page 95
- "Managing configuration templates" on page 99
- "Managing asset options" on page 115
- "Managing asset groups" on page 121

Assets

The **Assets** tab is the hub for all of the asset management features of your StrataSync account, including: adding new assets, importing and editing asset details, updating firmware, managing configuration templates, and deploying software options to your instruments, etc.

Click the **Assets** tab in the Main menu to bring up the Assets dropdown.

Asset List selected from the Assets tab

StrataSync	User	Guide
2213	2842	

Search bar

Searching and sorting

From the Assets List, you can easily find an asset using the search bar under each of the column headers or the sorting filters.

Searching

You can search by typing into the search bar under a column header. The list updates with the results.

Make sure to include hyphens for product names, etc., (e.g. T-BERD 2000).

Some of the columns provide dropdowns with releveant options once you start typing.

Scroll to the right to reveal more detail, including Software Options and Test Data.

Filtering multiple items

The Asset Class, Asset Type, and Asset Status columns allow you to select multiple items to filter at the same time (e.g. filter OneExpert and DSP only). When ready, select **Apply**.

Again, the filter criteria is listed under the Current Filters section on the left. Click the (x) to remove the filter. You can also click (x) to remove the filter from the search bar.

NOTE:

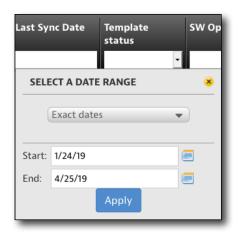

Remember when using filters to make sure the columns that you don't want included are blank, so the search results are not affected by them.

Date filters

The Last Sync Date column allows you to use the dropdown or calendars to filter by date or date range. Click the search box to bring up the date filter dropdown. When ready, select **Apply**.

Again, the filter criteria is listed under the Current Filters section on the left. Click the (x) to remove the filter. You can also click (x) to remove the filter from the search bar.

Please note the times shown in StrataSync correspond to your local time zone, no matter where the device was synced from.

Option filters

The SW Options and HW Options columns allow you to use the dropdown to filter by options that are installed or not installed. Click the search box to bring up the options filter dropdown.

Then use the Asset Type dropdown to choose the asset, and options filters. Just start typing to show the list. When ready, select **Apply**.

Again, the filter criteria is listed under the Current Filters section on the left. Click the (x) to remove the filter. You can also click (x) to remove the filter from the search bar.

SW Options	HW Options Firmware				
OPTIONS F	ILTER - Enter list of options 🛛 😣				
Asset Type The ''Installed	T-BERD/MT				
that do not h	e the "Not installed" list shows assets ave the specified option.				
Installed:	Example: "Option 1, Options 2"				
Not installed:	The "not installed" filter should be used with an asset type filter for best results				
	Apply				

NOTE: You can save custom filters to a favorite view for easy reference. See "Saving views" on page 69.

Sorting

You can also easily sort the columns by clicking the column header arrows to sort by ascending / descending values. Toggle through the options to remove the sort.

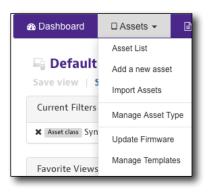

If you have multiple columns selected, you can also set the priority of how the columns themselves are sorted.

Views

Customizing views

StrataSync gives you the ability to customize your list views in a dashboard.

- 1. Select the **Assets** tab, and then select **Assets List**. The Assets List appears.
- 2. Select **Customize view** at the upper left of the screen. The Customize View screens appears.

Note: Once a shared view is created, it cannot be edited. You need to create a new one and delete the old one.

Asset List

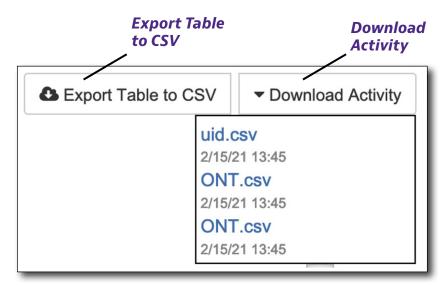

Exporting lists to CSV

On all list pages (Assets, Test Data, People, Organizations, Work Orders and Licenses), you can download your current list view using the **Export Table to CSV** button.

Use the **Download Activity** dropdown to see the list of files downloaded from the browser over the last 7 days as a result of clicking the **Export Table to CSV** button, or from the Test Data list view downloaded from the **Actions** button dropdown.

When ready, a popup will ask where you want to save the file.

Please note that to provide better UI responsive and overall system performance, users cannot initiate another download action until the previous one has completed.

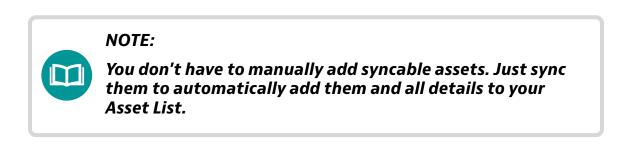

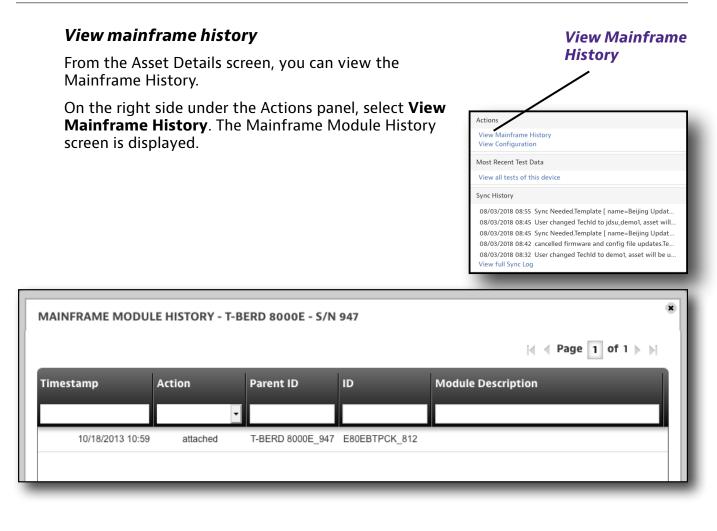

Exporting data to CSV

Editing asset details

- 1. From the Assets List, select a view on the left that includes the asset you want to edit or use the filters to find it.
- 2. Double click the asset to bring up the details screen.
- 3. Edit the information as needed, then click **Save** to confirm.

View configuration

From the Asset Details screen, you can view the Asset Configuration information.

On the right side under the Actions panel, select **View Configuration**. The Configuration Artifacts screen is displayed.

Depending on the instrument type, configuration files are organized into single or multiple sections (Channel Plan, Limit Plan, etc). Select a category to show just show that type of configuration.

Also, you can right-click a configuration file for more options, including:

- View
- Edit*
- Rename*
- **Deploy** Deploy this configuration to another unit
- Archive Save this configuration to the Global Archive for all users
- Copy to template
- Export
- Delete*

View sync log

From the Asset Details screen, you can view the configuration sync history of the device.

The sync log shows all the data transfers with a device, including sync timing or if a sync is needed to deploy configuration artifacts, test data, and when firmware has been updated, etc.

This can be very helpful in making sure your assets are up to date and all data has been synced.

On the right side under the Actions panel, select **View Full Sync Log**. The Sync Log History screen is displayed.

View documentation

From the Asset Details screen, you can view additional documentation for the device, including the user manual.

On the right side under the Actions panel, select **User Manual or View More Documents**. The user manual for the device is displayed.

Changing asset status

- 1. From the Assets List, select a view on the left that includes the asset you want to change or use the filters to find it.
- 2. Right-click the asset and choose *Change Status*.

Select the new status from the dropdown: *Active, Broken, Calibration, Retired, Loaned, Stolen, Lost, Sold, Repair, Spare, or Contractor*.

Change Status	Active
Clone Configurations	Broken
Reassign	Calibration
Delete	Retired
Stop pending update	Loaned
Update Firmware	Stolen
Deploy Template	Lost
Set Timezone	Sold
Add to Group	Repair
Remove from Groups	Spare
Synchronize Templates	Contractor

Reassigning an asset

Reassigning assets from the Assets List is similar to how you assign assets from the Holding Bin.

- 1. From the Assets List, select an asset (or assets) by clicking the checkbox to the left of the item.
- 2. Right-click the item (or use the **Action** dropdown) and select the **Reassign**. The Reassign Asset screen appears.
- 3. Select the organization and a user, then click the **Reassign** button at the bottom.

Adding new assets

This section details how to add syncable assets to StrataSync. This method isn't recommended, as you can add assets just by syncing them.

 Select the Assets tab, and then select Add a New Asset. The Add Asset screen appears.

As mentioned on the right, remember that you don't have to manually add syncable assets. Just sync an asset to automatically add it and all details to your Assets List.

2. Select the asset type and model, then click **Next**. The Asset Details screen appears.

3. Select a user for the asset, then click **Next**. The Select a User organization screen appears.

Download sample CSV

Importing assets

This section details how to import multiple non-syncable assets from a CSV file to the Holding Bin. This can be any equipment with a MAC address, including 3rd party.

- Select the Assets tab, and then select Import Assets. The Import Assets screen appears.
- To download a sample CSV file already formatted for StrataSync, select Download sample CSV file.

Make sure you retain the header row and enter the data fields starting on row 2, as follows:

- Asset type
- Unique ID
- MAC address
- Serial No.
- 3. Select **Browse** and choose the file you want to import, then select **Import**.

The assets will be imported into the Holding Bin.

into: Holdiny Bin
ts to inventory option is enabled in Systems
ay auto-move into inventory.
s into inveniory, the Tech ID field must be
e CSV file and Asset Management licenses mus
ownload sample CSV file):
e selected.

NOTE:

If the auto-move assets to inventory option is enabled in Systems Settings, assets may auto-move into inventory.

The Tech ID field must be specified correctly in the CSV file for this to happen.

Unique asset IDs

When importing assets for VIAVI instruments, use the following chart for the unique IDs, exactly as shown. Make sure to include the prefix and underscore (e.g. *T-BERD 2000 V2_ {Serial Number}*, for the T-BERD 2000.

Asset Type	Model	Unique ID		
CellAdvisor 5G	CA5000	CA5000_{Serial Number}		
CX300	CX300	CX300_{Serial Number}

Updating firmware

This feature allows you to manage firmware versions for all of your assets. You can choose to update via the online database or upload your own packages for beta testing, etc.

Select the **Assets** tab, and then select **Update Firmware.** The Update Firmware screen appears.

See "Managing firmware versions" on page 40 and "Firmware management" on page 237.

Online updates

This is the recommended method for updates to ensure you have the latest version from our server.

- Select **Online updates** as the update method, then select the asset type from the dropdown.
- Click Next. The Update Packages screen is displayed with your available packages.

Select an update method:	Online updates Upload package		
Select an asset type to view a	vailable online updates:	OneExpert 💌	

3. Select a package you want to download.

By selecting the **Enforce Firmware Version** checkbox at the top, the firmware version will be sent to the units upon a sync to indicate this firmware version needs to be installed.

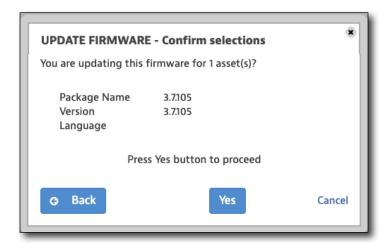

Remember when downloading firmware packages to unzip the file and follow instructions in the Read Me file.

 Click **Next**. The Select Assets screen is displayed.

Package Name	Version	Release Date 🔺	Status	
3.7.105	3.7.105	2018/06/08	Beta	
3.3.433	3.3.433	2017/02/24	Alpha	

- 5. Select the assets you want to update by selecting the checkboxes next to each item. Then click **Next**. A confirmation screen appears.
- 6. Review the information and click **Yes** to confirm. The assets will then be scheduled to update to the firmware on the next sync.

Downloading to a USB flash drive

For instruments that support updating the firmware via USB, you can also download packages to your PC. This method is not recommended.

1. From the Update Packages screen, scroll to the right to show release notes and download firmware options.

Download firmware

 Click the download button to download, then choose where you want to save the file.

> Remember when downloading firmware packages to unzip the file and follow instructions in the Read Me file.

- Follow the instructions to save the firmware to your USB flash drive.
- Then follow the instrument's firmware installation instructions to update.

	WARE - Choose an update package		
Vhen downloa Enforce Firm	ding a firmware package,please unzip and follow instruction ware Version	is in the "readme" f	ile
nguage	Comments	Release Notes	Download Firmware
	beta SW test for APOLLO-4360		*
	alpha release only for TDC and Matthias. Release notes are from previous beta.		*

Uploading packages

This feature allows you to upload your own packages for beta testing. This isn't recommended, as the online updates will always have the latest version.

- 1. Select **Upload packages** as the update method.
- Select Browse and choose the file you want to upload, then select Upload. A confirmation screen appears.
- Click Yes to confirm. The firmware package will then be available to assign to your assets.

Select an update	0.1	ne updates ad package	
Select an update	package to upload:	Browse No file selected.	

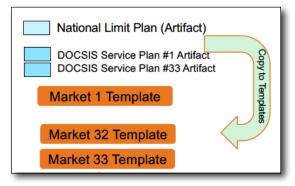

Managing configuration templates

This feature allows you to manage your configuration templates and assign to your assets. Templates organize and contain multiple testing and configuration settings, called *artifacts*, and are an easy way to standardize compliance testing and maintenance configurations deployed to individual meters, whole customer markets, or your entire enterprise.

Select the **Assets** tab, then select **Manage Templates**, and finally your asset type. The Manage Templates screen appears, as shown below.

On the left, you will see the **Global Archives**, the repository for all the artifacts to build configuration templates for your assets (e.g. Limit plans, DOCSIS service plans, etc.).

Artifacts are specific to instrument type, e.g. ONX artifacts are separate from those for NSCs. An artifact only includes one aspect of a configuration (e.g. one artifact can't have a limit plan and off-air ingress plan associated to it). Several artifacts can then be added to a configuration template and deployed to your instruments.

Individual artifacts can be deployed to your instuments, as well, but is not recommended.

Note: This feature is dependent on the instrument and may not be available for all products.

For more detailed information on templates and best practices, contact us at **CATVsupport@viavisolutions.com**.

Adding new configuration templates

Select the **New Template** button at the top right side of the screen. The Create Template screen is displayed.

Enter the information as needed, including adding a name, description, organization, and who shoud be able to edit, and click **Save**.

The new configration template will appear in the list.

NEW ONEEXPERT CATV TEMPLATE							
Edit the name and	d description for this	template					
* Name							
Description							
* Organization	Stage JDSU Demo	51					
Edit By	Anyone	•					
	Save	Cancel					
		Guille					

Depending on the instrument type, configuration files are organized into single or multiple sections (Channel Plan, Limit Plan, etc). Select a category to show just show that type of configuration.

Also, you can right-click a configuration file for more options, including:

- View
- Edit*
- Rename*
- **Deploy** Deploy this configuration to another unit
- Archive Save this configuration to the Global Archive for all users
- Copy to template
- Export
- Delete*

NOTE:

For the second s

For Edit, Rename, and Delete, changes will be applied to the instrument on the next sync. This also removes this instrument from its template.

Editing configuration template artifacts

If you have the appropriate permissions, you can edit template artifacts.

Double click the asset you want to edit (or right-click and select **View** from the dropdown). The Configuration Artifacts screen is displayed.

Under the **Template Sections** area on the left, you will see all of the available sections you can add to your template.

On the right, the **Configuration Artifacts** area shows the artifacts you currently have assigned to this template.

Template Sections			Configuration Artifacts							
Limit Plan	= Match	•						📳 Limit P	lan Global Archive	O New Limit Plan

Changing the deployment policy

To change the deployment policy for each configuration, select the dropdown next to each one.

- **Ignore** Ignore the config artifacts in this section when the template is deployed
- Match Deploy the config artifacts in this section to the asset and delete similar artifacts

• Add – Deploy the config artifacts in this section to the asset, replacing similarnamed artifacts only

Sorting by configuration template status

Select the **Template status** column and choose the status from the dropdown to sort.

- **None** No current status
- **Pending** Template is pending to be deployed to the asset
- Deployed –Template has been deployed to the asset
- **Asset Newer** The instrument user modified the template on the asset after the server template version was created.

The template on the instrument is different than the template created on StrataSync and the template on the instrument was created after the template on StrataSync.

 Template Newer – The template on the instrument is older than the template on the server.

A new template was created on StrataSync, or an existing template was modified on StrataSync, but the new (or modified) template was not deployed to the instrument. Thus the template on the meter does not match the template on StrataSync and the template on StrataSync is newer.

You can also easily sort the columns by clicking the column header arrows to sort by ascending / descending values. Toggle through the options to remove the sort.

If you have multiple columns selected, you can also set the priority of how the columns themselves are sorted.

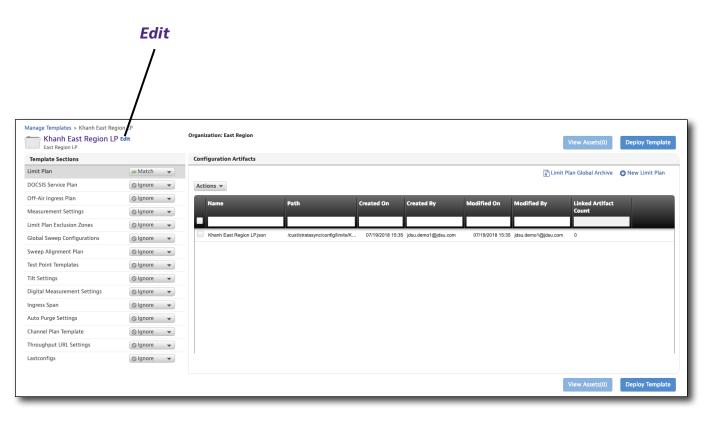

Actions - For 0 select	ted record(s)			
Asset Status	Last Sync Status	Last Sync Date	Template Status	SW Options

Deleting configuration templates

Select the template you want to delete, then right-click and choose **Delete** (or use the **Actions** dropdown). A confirmation screen asks you to confirm. Click **Delete**.

Deploying configuration templates

To deploy a configuration template, right-click the template on any menu and select **Deploy** from the dropdown (or from the Configuration Assets screen, click the **Deploy Template** button in the upper right). The Deploy Select Assests screen is displayed.

Auto deploy settings

You can set up auto deploy settings for any configuration template. Right-click the template on any menu and select **Auto Deploy Settings** from the dropdown (or use the **Actions** menu). The Auto Deploy Settings screen is displayed.

The options are:

- Use Organization Template Settings for this organization and its Suborganizations – Allows you to override the parent organization's template auto deploy settings
- Enable Auto Deploy for AssetType Allows you to set whether auto deploy is enabled for the selected asset type
- Force Auto Deploy You can "force" StrataSync to deploy the template to all applicable assets associated with the auto deploy settings, regardless of the asset's current Template Status. This is a "one time" action initiated when the box is checked and **Save** is selected.

Click **Select Organization** at the top to add more organizations, as needed.

When done, click **Save**.

Artifact linking

Artifact linking provides synchronization between parent and child configuration artifacts. Changes made to the parent configuration artifact will be propagated to the child configuration artifact.

An artifact link is established when you select **Copy To Template** from the **Actions** menu of configuration artifact. The artifact you are copying from will be the parent and the artifact that is created in the template will become the child.

Note: This feature is dependent on the instrument and may not be available for all products.

Linking from a Global Archive artifact

Linking from a template artifact

Actions that update linked artifacts

The artifact linking capability is enabled in **System Settings > Template Settings >** Enable Configuration Artifact Link from Global Archive or Templates.

See "Template settings" on page 209.

The following actions will update an artifact link:

Rename actions

- Renaming of a Global Archive or template artifact will update all linked artifacts in templates
- Renaming of a Global Archive channel plan (eg.: "N1" to "N2") which is linked to template T1 that already has channel plan N2 before renaming will delete oldest channel plan N2

Example:

- Consider Global Archive channel plan is N1
- Consider template T1 has channel plan N2
- Using copy to template, copy Global Archive channel plan "N1" to "T1"
- Now template T1 has two channel plans N1 and N2 where N1 is linked to Global Archive N1
- Rename Global Archive channel plan "N1" to "N2"
- Template T1 will have its linked channel plan "N1" renamed to "N2"
- Template T1 has two channels plans named "N2"
- The old N2 will be deleted

Edit actions

• Edit of Global Archive or template artifact will update all linked artifacts in templates

Delete actions

- Template used for auto deploy cannot be deleted
- Deleting a Global Archive artifact deletes template artifacts linked to it from templates
 - All template artifacts that are linked to deleted template artifacts will also be deleted
 - The artifacts will also be deleted from assets if following are true
 - Template section status is "match"
 - Asset will remain associated to template
- Deleting a template artifact deletes template artifacts linked to it
 - Template will be auto-deployed again

Breaking links between configuration artifacts

If any changes are made to a child artifact, the established link between the parent artifact and child artifact is disconnected. Once the link is broken, changes to the parent artifact are not applied to prior linked child artifacts.

To re-enable the link, select **Copy To Template** on the parent artifact and copy to the respective template.

Disabling and re-enabling artifact linking

If artifact linking is disabled, then modifications to the parent artifact will not update linked artifacts in templates.

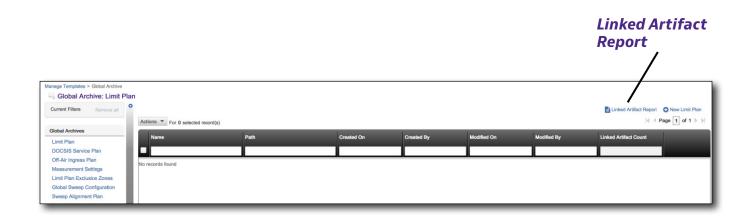

If a link is disabled after it is enabled, links are still maintained, however modifications to parent artifact will not update linked artifacts in templates.

If disabled links are re-enabled, artifacts will be re-synced to all artifacts with linked artifacts and templates will be deployed based on current auto deploy settings.

Reporting

Reporting templates linked to Global Archive artifacts

- 1. Navigate to **Assets Tab > Manage Templates** and select an asset type.
- 2. Select any section under "Global Archive".
- 3. Select **Linked Artifact Report** to view the report which opens in a separate tab. The report lists all archive artifacts that are linked by templates per asset type.

Linked Archive	Artifact Report			
Configuration Name	Configuration Type	Asset Type	Template	Template Org Path
DOCSIS-ga-rn.oxs	DOCSIS Service Plan	OneExpert CATV	NorthRegion	JDSU
DOCSIS-ga-rn.oxs	DOCSIS Service Plan	OneExpert CATV	R2	JDSU.KQ Org

Reporting templates linked to template configuration artifacts from other templates

- 1. Navigate to **Assets Tab > Manage Templates** and select an asset type.
- 2. Select **Linked Artifact Report** to view the report which opens in a separate tab.

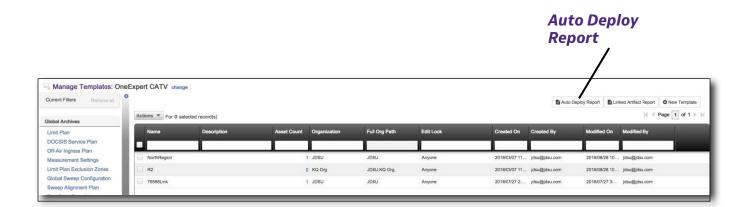

The report lists all template configuration artifacts along with template names that are linked by other templates per asset type.

Managing asset options

As covered briefly earlier in this chapter, this feature allows you to manage your software options and assign to your assets.

Select the **Assets** tab, then select **Manage Asset Options**. The Manage Software Options screen appears.

Assigning an option

To assign a software option to an asset, right-click the option and select **Assign** from the dropdown (or use the **Actions** dropdown). The Manage Permanent Option Pool screen is displayed. This is a quick way to assign an option to a few or even multiple assets.

Select the **Assign** checkboxes on the left for the assets you want to apply the software option, then select **Deploy** from the **Actions** dropdown.

Assign column Default View Save view | Save view as... | Customize Current Filters Remove all MANAGE P RMANENT OPTION POOL - Catalog No: C510GELAN-U1 X Asset Type MAP-2100, T-BERD/ MTS 5800, T-BERD/MTS 5800 V2, 10GigE LAN Ethernet Descripti T-BERD/MTS 5800-100G, T-BERD /MTS 5882 sign check boxes choose which assets should be assigned a permanent license Using the 99 of 10 icenses available |{ | Page 1 of 3 |> || Actio Cancel Favorite Views My Saved views Asset Type Serial No Tech ID × Unique ID Tech FullName Parent Type <u>Default View</u> MAP-2100, T-BERD/MTS T-BERD/MTS 5800 V2 WMME0071450099 T-BERD5800V2 Shared views 5800 tech 5800 tech first 5800 tech las × T-BERD/MTS 5800 V2 WMMP0081450013 T-BERD5800V2_... 5800 tech 5800 tech_first 5800 tech_last T-BERD/MTS 5800 V2 WMMP0081450020 T-BERD5800V2_... 5800 tech Show the view list O 5800 tech_first 5800 tech_las WMMP0114450030 T-BERD5800V2_... 5800 tech T-BERD/MTS 5800 V2 5800 tech_first 5800 tech_last T-BERD/MTS 5800 V2 WMMP0114750022 MTS5800V2 WM... 5800 tech 5800 tech first 5800 tech last 5800 tech first 5800 tech last T-BERD/MTS 5800 V2 WMMP0114450026 T-BERD5800V2 ... 5800 tech T-BERD/MTS 5800 V2 WMMP0114750022 T-BERD5800V2_... 5800 tech 5800 tech_first 5800 tech_last WMMP0114750053 T-BERD5800V2_... 5800 tech T-BERD/MTS 5800 V2 5800 tech first 5800 tech last T-BERD/MTS 5800 V2 WMMP0114750052 T-BERD5800V2_... 5800 tech 5800 tech_first 5800 tech_last

A confirmation screen will ask if you want to deploy the option. You can also choose to send an email to the user with challenge codes (not recommended).

Click Confirm.

The option will be deployed to the assets on the next sync.

Viewing orders

To view all orders for a software option, right-click the option and select *View Orders* from the dropdown (or use the **Actions** dropdown). The License Pool Orders screen is displayed.

Here you can see the individual purchases of software options that make up the selected pool.

Order Number	Date Delivered	Customer ID	Customer Name	PO Number	Contact Name	Line No	Total Quantity
I	01/17/2014	16653523	Stage JDSU Demo1	1			90

Moving an option to another organization

To assign a software option license to another organization or suborg, right-click the option and select *Reallocate* from the dropdown (or use the **Actions** dropdown). The Reallocate to Another Organization screen is displayed.

Enter the number of licenses you want to move and choose the organization to move them to. When done, click **Reallocate**.

REALLOCATE TO ANOTHE	RORGANIZATION	*

Viewing asset groups

You can use the **View Asset Group** dropdown to select the asset group you want to filter by. The Asset List shows the list for that group.

Asset group management

From the Assets List, select **Manage Asset Groups** at the top of the screen. The Group Management screen is displayed.

Adding new groups

Select **New Group** at the top right side of the screen. The Create A New Group screen is displayed.

Enter a group name and description, and click **Save**.

The new group will appear in the list.

Test Data

This chapter covers how to use the Test Data Management features of StrataSync, including the following:

- "Test Data" on page 126
- "Searching and sorting" on page 127
- "Views" on page 130
- "Test Data List" on page 133

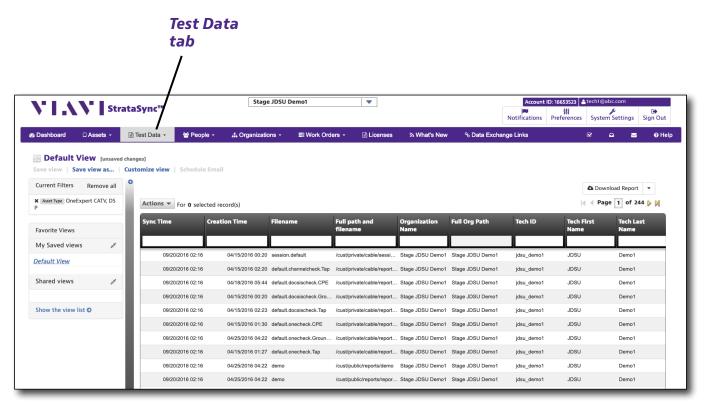

Test Data

The **Test Data** tab is the hub for all of the test data uploaded from your field instruments to your StrataSync account.

Click the **Test Data** tab in the Main menu to bring up the Test Data dropdown.

Dashboard	🗆 Assets 🕞	🖹 Test Data 👻	
		Test Data List	
🔚 Default	View [unsave	d changes]	
Save view	Save view as	Customize view	L.

Test Data dropdown menu

Test Data List selected from the Test Data tab

Searching and sorting

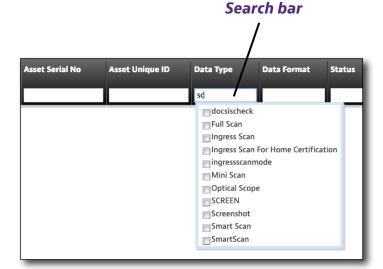

From the Test Data List, you can easily find an asset using the search bar under each of the column headers or the sorting filters.

Searching

You can search by typing into the search bar under a column header. The list updates with the results.

Some of the columns provide dropdowns with relevant options once you start typing.

The available data types are dependent on the selected instruments.

The filter criteria is listed under the Current Filters section on the left. Click the (x) to remove the filter. You can also click (x) to remove the filter from the search bar.

The **Sync Time** in the Default View is filtered to **Today**, so make sure to clear that in the search bar to see all the test data.

Default View	

Filtering multiple items

The Asset Type column allows you to select multiple items to filter at the same time (e.g. filter OneExpert and DSP only). When ready, select **Apply**.

Again, the filter criteria is listed under the Current Filters section on the left. Click the (x) to remove the filter. You can also click (x) to remove the filter from the search bar.

NOTE:

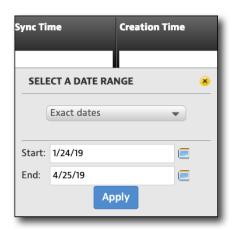

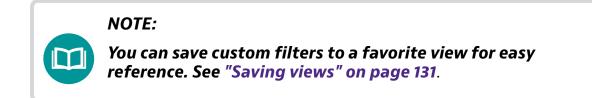

Remember when using filters to make sure the columns that you don't want included are blank, so the search results are not affected by them.

Date filters

The Sync Time and Creation Time columns allow you to use the dropdown or calendars to filter by date or date range. Click the search box to bring up the date filter dropdown. When ready, select **Apply**.

Again, the filter criteria is listed under the Current Filters section on the left. Click the (x) to remove the filter. You can also click (x) to remove the filter from the search bar.

Sorting

You can also easily sort the columns by clicking the column header arrows to sort by ascending / descending values. Toggle through the options to remove the sort.

If you have multiple columns selected, you

can also set the priority of how the columns themselves are sorted.

Views

Customizing views

StrataSync gives you the ability to customize your list views.

- Select the **Test Data** tab, and then select *Test Data List*. The Test Data List appears.
- 2. Select **Customize view** at the upper left of the screen. The Customize View screens appears.

Test Data List

Downloading test data

- 1. From the Test Data List, select a view on the left that includes the asset you want to download or use the filters to find it.
- 2. Right click the asset data you want to download and choose **Download** (or use the **Actions** dropdown).
- A pop-up appears asking if you want to download the HTML version (for supported test types, typically where 'Data Format' = "application/json") or the raw test results file. Select the file type and click **Download**.

If you select **HTML Report**, any test results files which support an HTML view will be included in the downloaded ZIP file as HTML, and any other file types will be included in their native formats.

If you select **Raw File**, all test results files will be downloaded in their native formats.

4. Choose where you want to save the file.

Choosing the test results download type

For customers on a StrataSync BASE account (or the legacy CORE), users can select up to a maximum of 100 table rows (each row representing a test data file) to initiate a download as a compressed '.zip' file (if you just download a single file the file is not compressed). Customer accounts with any new StrataSync subscription plan (PRO, ANALYTICS or ENTERPRISE WORKFLOW), or appropriate legacy PLUS licensing, will support users selecting up to 1,000 files for export.

Depending on the account licensing, if a user selects more than the appropriate limit, a warning message is displayed as shown in the example below.

Deleting test data

If you have the appropriate permissions, you can delete test data.

Select the data you want to delete, then right-click and choose **Delete** (or use the **Actions** dropdown).

A confirmation screen asks you to confirm. Click **Confirm**.

Delete confirmation	*
Are you sure you want to delete 4 se	elected test data file(s)?
Confirm	Cancel

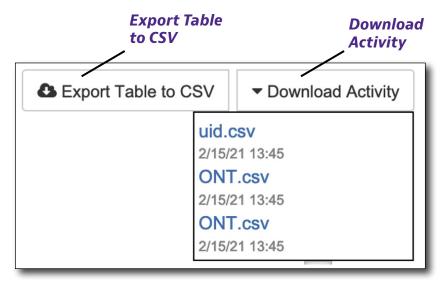

Exporting lists to CSV

On all list pages (Assets, Test Data, People, Organizations, Work Orders and Licenses), you can download your current list view using the **Export Table to CSV** button.

Use the **Download Activity** dropdown to see the list of files downloaded from the browser over the last 7 days as a result of clicking the **Export Table to CSV** button, or from the Test Data list view downloaded from the **Actions** button dropdown.

When ready, a popup will ask where you want to save the file.

Please note that to provide better UI responsive and overall system performance, users cannot initiate another download action until the previous one has completed.

Exporting data to CSV

For customers on a StrataSync BASE account (or the legacy CORE), users can select up to a maximum of 1,000 table rows (each row representing the metadata for a test data file) to export to a CSV file. Customer accounts with any new StrataSync subscription plan (PRO, ANALYTICS or ENTERPRISE WORKFLOW), or appropriate legacy PLUS licensing, will support users selecting up to 80,000 rows for export.

Depending on the account licensing, if a user selects more than the appropriate limit, a warning message is displayed as shown in the example below.

People

This chapter covers how to use the People Management features of StrataSync, including the following:

- "People" on page 138
- "Searching and sorting" on page 139
- "Views" on page 142
- "People List" on page 145
- "Adding a user" on page 153
- "Importing users" on page 160
- "Managing user roles" on page 161

People

The **People** tab is the hub for all of the user and role management features of your StrataSync account, including: adding and importing users, and managing those users' roles and permissions.

Click the **People** tab in the Main menu to bring up the People dropdown.

People List selected from the People tab

Search bar

Searching and sorting

From the People List, you can easily find an asset using the search bar under each of the column headers or the sorting filters.

Searching

You can search by typing into the search bar under a column header. The list updates with the results.

Some of the columns provide dropdowns with releveant options once you start typing.

		/	1
Login Name	First Name	Last Name Ted	ch ID
east.tech1@jdsu.com	East	5800 tech_last	_tech1

Scroll to the right to reveal more detail, including Manager's Name and Last Login Date.

Filtering multiple items

The Role column allows you to select multiple items to filter at the same time (e.g. filter Firmware Tester and Admin only). When ready, select **Apply**.

Again, the filter criteria is listed under the Current Filters section on the left. Click the (x) to remove the filter. You can also click (x) to remove the filter from the search bar.

NOTE:

Remember when using filters to make sure the columns that you don't want included are blank, so the search results are not affected by them.

Date filters

The Last Login Date column allows you to use the dropdown or calendars to filter by date or date range. Click the search box to bring up the date filter dropdown. When ready, select **Apply**.

Again, the filter criteria is listed under the Current Filters section on the left. Click the (x) to remove the filter. You can also click (x) to remove the filter from the search bar.

hone	Login Last Login Enabled Date	
SELE	ECT A DATE RANGE	
(Exact dates 👻	
Start:	1/4/19	-
End:	4/25/19	
	Apply	

NOTE: You can save custom filters to a favorite view for easy reference. See "Saving views" on page 143.

Sorting

You can also easily sort the columns by clicking the column header arrows to sort by ascending / descending values. Toggle through the options to remove the sort.

If you have multiple columns selected, you can also set the priority of how the columns themselves are sorted.

Views

Customizing views

StrataSync gives you the ability to customize your list views.

- 1. Select the **People** tab, and then select **People List**. The People List appears.
- 2. Select **Customize view** at the upper left of the screen. The Customize View screens appears.

People List

Exporting lists to CSV

On all list pages (Assets, Test Data, People, Organizations, Work Orders and Licenses), you can download your current list view using the **Export Table to CSV** button.

Use the **Download Activity** dropdown to see the list of files downloaded from the browser over the last 7 days as a result of clicking the **Export Table to CSV** button, or from the Test Data list view downloaded from the **Actions** button dropdown.

When ready, a popup will ask where you want to save the file.

Please note that to provide better UI responsive and overall system performance, users cannot initiate another download action until the previous one has completed.

Exporting data to CSV

Editing user details

- 1. From the People List, select a view on the left that includes the user you want to edit or use the filters to find it.
- 2. Double click the user to bring up the details screen.
- 3. Edit the information as needed, then click **Save** to confirm.

You can change any of the information except the username.

Reset password

From the User Details screen, you can reset your password (or a user's if you have permission).

On the right side under the Actions panel, select **Reset Password**. The Reset Password screen is displayed.

Actions View this user's assets View this user's assets View this user's test data Reset Password Attributes Created Date:10/21/2013 14:57 Last Modified:07/19/2018 21:51 Last Login:05/18/2016 10:39 Assigned Assets:0

From the **Reset Password** screen, choose whether you want the system to email you the temporary password, or if you want to display it.

When you log in, enter the temporary password, then the new one. Enter it again to confirm.

When done, click **Save** to confirm.

You can also change your password through Preferences. See "Configuration" on page 227

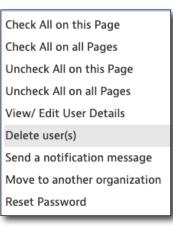

Note: If you need help changing your password, contact your StrataSync administrator.

1	Done

Deleting a user

- 1. From the People List, select the checkbox next to the user (or users) you want to delete.
- 2. Right-click the person (or use the **Action** dropdown) and select **Delete**.
- 3. A confirmation screen asks you to confirm. Click **Confirm.**

Delete confirmation	*
Are you sure you want to delete s	selected user(s)?
Confirm	Cancel

StrataSync will not delete users under the following conditions:

• Before deleting a user, all associated assets must be removed (StrataSync returns this error if assets are assigned to the user).

This issue is resolved by reassigning the assets to another StrataSync user.

• Users with an active StrataSync session cannot be deleted (StrataSync returns this error if the user has an active session).

The user cannot be deleted until the StrataSync session has ended. In User Details, uncheck the **Login Enabled** box (and select **Save**) to prevent the user from logging into StrataSync in the future. Then delete the user later after the StrataSync session has completed.

 Users that have been assigned the Manager of an Organization in the Organization tab cannot be deleted (StrataSync returns the following error if the user is the Manager of an Organization).

1 of 1 user(s) cannot be deleted: Cannot delete user who is manager

This issue is resolved by assigning another StrataSync user the Manager of the Organization(s) assigned to the user to be deleted. To find the Organization(s) assigned to the user, (from the People Tab) filter the People List by the user's login name in the Manager Login Name column. Note all Organizations listed in the Organization column.

Login Name	First Name	Last Name	Tech ID	Role	Organization	Full Org Path	Manager Login Name
							earl.pope@stagedemo.com
bud.pope@stagedemo.c	Earl	Pope	bp001	Firmware User	Earl Test	Stage JDSU Demo1.Earl	earl.pope@stagedemo.com

Edit Organization

Sending a notification to a user

- 1. From the People List, select the checkbox next to the user (or users) you want to notify.
- 2. Right-click the person (or use the **Action** dropdown) and select **Send a Notification Message**.
- 3. Click Send.

SEND A NOT	IFICATION	*
Message:	Please sync your meter	
	Send	Cancel

Moving a user

- 1. From the People List, select the checkbox next to the user (or users) you want to move.
- Right-click the person (or use the Action dropdown) and select *Move to another* organization. The Move User screen appears.
- 3. Select the organization or suborg and click **Next**.
- A confirmation screen asks you to confirm. The associated assets will also be moved. Click **Move.**

You can also choose to move the test data or leave it in the current org.

Resetting passwords

Resetting a user's password is similar to the steps covered previously. See "*Reset Password*" on page 148.

Adding a user

 Select the **People** tab, and then select **Add User**. The Add User screen appears.

> You can also click the **Add User** button on the right side of the People List screen.

 Enter the information as needed, username, email, first/last name, tech ID, etc.

> The username must be unique for each StrataSync profile and formatted as an email address (e.g. johnsmith@ abc.com), but doesn't have to be a valid email.

You can use the user's actual email address for both username and email address.

The Employee / Tech ID must also be unique for each profile.

- 3. To send a welcome email to the user with a temporary password, select **Send Email**.
- ADD USER Input user details User Information * Username: * Email: * First Name: * Last Name: * Employee/Tech ID: Send email: ~ Landing Site: Administra... 🔻 Role: User Information ~ Login Enabled: Visibility Organization: Stage JDSU Demo1 Organization: Stage JDSU Demo1 Manager: JDSU Demo1 **Contact Information** Other Attributes Preferences Add Cancel
- 4. Use the **Landing Site** dropdown to choose *Administrator* or *Technician* Site, then use the **Role** dropdown to choose a role.
- 5. Click **Visibility Organization** to change the permissions visibility for the user. All permissions granted to a user will apply to the visibility organization and its child organizations.
- 6. Click **Organization** to change the organization.

The following information will help guide selecting the correct organization for the user:

- Assets assigned to users are also assigned to the user's organization.
- Test data assigned to users is also assigned to the user's organization.

- Advanced asset management features are administered based on the user's organization (examples include firmware auto deploy, asset configuration template auto deploy, job template auto deploy, StrataSync control of Mobile Tech app settings, and StrataSync control of custom documentation).
- Deployment of asset software options should also be considered.

When asset software options are applied to a StrataSync account, the options are assigned to an organization.

When using StrataSync to deploy software options to assets, the asset must be assigned to the organization (or one of its child organizations) where the options are assigned. However, if the software options are deployed using the VIAVI Mobile Tech app, the software options can only be deployed if the options are assigned to the user's visibility organization.

- 7. Add additional optional contact information, attributes, and preferences in those sections.
- 8. When done, click **Add**. The new user will appear in the People List.

Setting access and visibility

You can give a user certain access and visibility to data in the organization or suborganization. You can also move them to another organization from here.

Changing the visibility

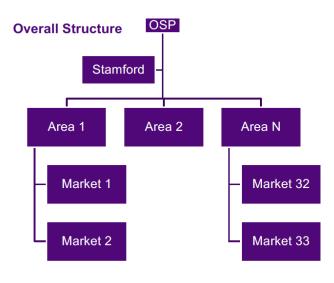

From the People List, select a view on the left that includes the user you want to edit or use the filters to find it.

Double click the user to bring up the details screen.

Under the Access and Visibility section, click the organization next to **Visibility Organization**. Choose the new organization, and click **OK**.

Access and Visibility

Changing an organization

You can move users to another org from the User Details screen, similar to how it's done from the People List and from the People tab. See "*Moving a user*" on page 152.

Adding additional visibility

You can give a user additional visability by setting up more organizations, landing sites, or roles for customized access. This is an advanced feature and is not recommended for most situations.

- 1. From the People List, select a view on the left that includes the user you want to edit or use the filters to find it.
- 2. Double click the user to bring up the details screen.
- 3. Under the Additional Visibilities section, click the **Add Visibility** button on the right. The Add Visibility screen appears.

Note: The Landing Site for the user must be set to **Administrator Site** for the **Add Visibility** button to appear.

- 4. Next to **Visibility**, select a new visibility organization, and use the dropdowns to choose the **Landing Site** and **Role**.
- 5. When done, click **Save**. Continue to add more visibilities and they will show in the list.

On the next login to StrataSync, the user will see the **Switch Visibility** icon next to the organization at the top of the screen.

Additional Visibilities			1
			Add Visibility

Landing Site:	Administra 👻	
Role:	Firmware T 👻	
	Save	Cancel

Switching visibility organizations

Once additional visibility has been set for the user, and they log back into StrataSync, they will see the **Switch Visibility** icon next to their organization dropdown at the top of the screen.

Select Switch Visibility. The Switch Visibility screen appears.

Choose the visibility organization and click **Apply**. StrataSync will refresh and show the details and data for that organization and its suborganizations only.

Assigning a role

You can give a user certain access and visibility to data in the organization or suborganization. You can also move them to another organization from here.

Assigning or changing role assignment

From the People List, select a view on the left that includes the user you want to edit or use the filters to find it.

Double click the user to bring up the details screen.

Under the Role section, use the **Landing Site** and **Role** dropdowns to make necessary changes.

When done, click **Save**.

Adding additional permissions

From the Roles section, you can also set additional permissions.

In the left column are the **Permissions available**. The right column shows the **Permissions granted**. Click the (+) to expand categories.

Select a permission, then use the arrow buttons to add or remove permissions to adjust the granted list on the right.

When done, click **Save**.

Importing users

This section details how to import multiple users from a CSV file.

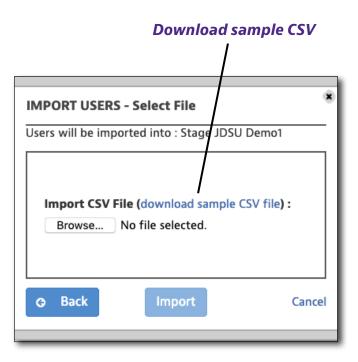

- Select the **People** tab, and then select *Import Users*. The Import Users screen appears.
- Select the organization or suborganization you want to import to, and click **Next**. The Select File screen appears.
- To download a sample CSV file already formatted for StrataSync, select **Download sample CSV** file.

Make sure you retain the header row and enter the data fields starting on row 2. See the sample file for more information.

4. Select **Browse** and choose the file you want to import, then select **Import**.

The users will be imported into the People List.

Importing changes for users

If you have bulk changes to update for users, the steps are similar to importing new users.

Edit the CSV as needed, (updating the fields that have changed), and reimport the file as before. This includes organization changes, roles, etc.

Managing user roles

This section details how to create and manage user roles. If you have the appropriate permissions, you can grant permissions for roles that are equal or under your own.

Select the **People** tab, and then select **Manage User Roles**. The Manage User Roles screen appears.

Adding roles

Click **Create a new role** at the top right side of the screen. The Create User Role screen is displayed.

ANAGE USER ROLES				eate a new ro
				Create a new role

NOTE:

Before deleting a role, all associated users must be removed.

Unidentified Tech ID role

StrataSync has a few ways it treats assets when a seemingly "new" Tech ID is synced from an asset.

When an asset is synced with an unknown Tech ID (i.e. a Tech ID that is not in the account's People List), the **Unidentified Tech ID** role may be assigned.

You can auto-assign assets without a tech ID or have unidentified Tech IDs assigned to a specific ID, enabled in System Settings. See *"Asset management" on page 235* for details.

If the asset exists in the system, is synced with an undefined Tech ID, and has
previously been assigned to another tech in an organization at some point,
StrataSync creates a new user with an Unidentified TechId role for the asset in
the same organization. Otherwise, the asset information is updated and remains
unassigned.

In this example, an asset was previously synced to a Tech ID. Sometime later, a new Tech ID syncs the asset to StrataSync, and since this ID is unknown, StrataSync creates a user with the Unidentified TechId role for the asset in the same organization.

- If the asset is already in the Holding Bin, it just gets updated with the asset information and remains in the Holding Bin. No user is created.
- If the asset does not exist in the account, it will be placed in the Holding Bin. No user is created.

In the example below, Tech ID 4580409 was populated in an asset and synced to StrataSync. However, Tech ID 4580409 is not in the People List for this StrataSync account. StrataSync creates a new user in this format:

- Username is "Tech ID entered in asset"_"StrataSync Account Number"
- Email is "Tech ID entered in asset"_"StrataSync Account Number"
- First Name "Tech ID entered in asset"_"first"
- Last Name is "Tech ID entered in asset"_"last"
- Tech ID is "Tech ID entered in asset"

User Information					
* Username:	4580409_16653523				
* Email:	4580409_16653523				
* First Name:	4580409_first				
* Last Name:	4580409_last				
Unique ID:	13866				
* Employee/Tech ID:	4580409				

The new user is assigned the Unidentified Techld role. Users in the People List with the Unidentified Techld role can be found by filtering on the Role field.

Login Name	First Name	Last Name	Tech ID	Role Unidentified Techld	Unidentified TechId
t6d1_16653523	t6d1_first	t6d1_last	t6d1	Unidentified Techld

123_16653523	123_first	123_last	123	Unidentified Techld	
company_16653523	Company_first	Company_last	company	Unidentified Techld	

Tech ID best practices

StrataSync Administrators should periodically filter the People List and Holding Bin for the users with Unidentified Tech IDs and take corrective action.

The two most common reasons for the creation of Unidentified TechIds are:

- The Tech ID populated in the asset is correct, but a StrataSync username has not been created for this legitimate Tech ID.
- This issue can be resolved by an Administrator editing the Unidentified Techld fields with proper information and assigning the user the correct role. Also, if appropriate, the **Login Enabled** box should be checked.
- The Tech ID populated in the asset is not correct; the Tech ID entered in the asset was a typo. This issue can be resolved by reassigning the asset to the correct Tech ID and then deleting the Unidentified TechId that is incorrect.

Permissions details

The following includes details on all the available role permissions for each category.

API Access

Asset API – Add/update/delete assets via API interface
Option API – Add/update/delete option via API interface
Test Data API – Add/update/delete test data via API interface

Asset Management

Add Asset – Add an asset

Assign Assets to Users – Reassign asset to another user or move asset from holding bin to inventory

Change Asset Status – Change asset's state to Stolen, active etc.

Delete Assets – Delete asset from holding bin /inventory

Edit Assets – Edit an asset

Enforce Firmware – Allow firmware enforce

Import Assets - Import assets from external csv file

Manage Asset Groups – Manage (add/edit/remove assets to/from) asset groups

Manage Asset Types – Manage(Add/edit/delete) asset type

Update Firmware* – Allow update firmware

View Asset Configuration – Allow View asset configuration

View Assets* – View asset list under the 'Assets' tab etc.

Configuration Management

Deploy Configurations – Allow to deploy configuration data

Handle Configuration Files – Allow editing configuration files

Manage Configuration Templates – Allow create/edit for asset templates

Manage Global Archives – Allow view global archive/ manage global archive configuration files

View Configuration Files – Allow viewing configuration files

* These roles are available for both Technician and Administrator role types. All others are Administrator only.

Data Exchange

Copy to Data Link – Allow test data copy to data link Manage Links – Manage(create/modify/delete) test data exchange links Manage Subscriptions – Manage test data link subscriptions Share Work Orders – Allow work orders to be shared View Links – Allow viewing test data manage links View Subscriptions – Allow viewing test data manage subscriptions

Firmware Management

Firmware Approver – Allow firmware to be approved

Firmware Tester – Allow firmware to be tested

Manage Firmware Auto Deploy Settings – Allow management of firmware auto deploy settings

Job Management (Previously Work Order Management)**

Add Jobs – Allow to add new jobs Approve Jobs – Allow to approve completed jobs Assign Jobs – Allow to assign jobs Delete Jobs – Allow to delete jobs Edit Jobs – Allow to edit jobs View Jobs – Allow jobs to be viewed

Job Template Management (Test Process Automation only)***

Add Job Templates – Allow to add new job templates Delete Job Templates – Allow to delete job templates Deploy Job Templates – Allow to deploy job templates

** Previously, the Work Order Management permission group, renamed to Job Management. Updates do not impact existing user permissions or workflow for Work Order Management in previous versions of StrataSync (prior to 15.5). These permissions are also used for Test Process Automation, with different behavior. See the *TPA User Guide* for details.

*** The Job Template Management permission group does not impact existing user permissions for Job Template Management in previous versions of StrataSync (prior to 15.5). These permissions are only used for Test Process Automation. See the *TPA User Guide* for details.

Edit Job Tempates – Allow to edit job templates

View Job Templates – Allow job templates to be viewed

License Management

View License – Allow viewing of licenses under Licenses tab

Miscellaneous Permissions

Delete Service Documents – Allow to delete service documents

Schedule View Emails – Email view on schedule

Send Notifications - Allow Send notification to user

Share Views – Share, un-share Personal Views

View Summary Panels – View summary panels on Dashboard

Options Management

Assign Options* – Assign permanent and timed software options to assets

Generate Installed Options Report – Installed options report for assets

Generate Option Utilization Report – Utilization report for floating and timed floating options per asset

Import Options – Allow viewing of import options link(under manage asset options) for bulk import of options

Manage Floating Options* – Assign floating options to assets

Move Options – Move/reallocate options to other organization

View Options* - View software options/order details

Organization Management

Add Organizations – Add organization unit (under Manage Organizations)

Delete Organizations – Delete organization unit (under Manage Organizations)

Edit Organizations – Edit organization unit(under Manage Organizations)

Import Organizations – Import organizations (upload file)

Manage Organization Settings – Enable editing organization settings (under Manage Organizations)

Move Organizations – Move organization in the organization hierarchy (under Manage Organizations)

View Organizations – View Organization list (under Organizations tab)

Report Management

View Reports - Allow reports to be viewed

System Settings

Manage Anti-Theft Settings – Manage anti-theft settings for instruments

Manage Artifact Link Settings – Manage artifact link settings for instruments

Manage Asset Management Settings – Manage asset management system settings

Manage Auto Purge Work Order Settings – Manage auto purge settings for work orders

Manage Calibration Due Settings – Configure calibration due times

Manage Customer Doc Settings – Manage customer documentation settings

Manage Failed Test Notifications Settings – Manage failed test notification events

Manage Firmware Management Settings – Manage firmware management settings for instruments

Manage General Settings – Manage general preferences

Manage Lease Company Settings – Manage (add/edit/delete) lease company

Manage Measurement Units Settings – Configure measurement units

Manage Mobile Tech Settings – Manage Mobile Tech app preferences

Manage Notifications Settings – Manage notification events

Manage Organization Settings – Enable organization settings override system settings

Manage POP Report Limits Settings – Configure POP report limits

Manage Security Settings – Manage security preferences (password)

Manage Template Auto Deploy Settings – Manage template auto deploy settings for instruments

Manage What's New Settings – Manage What's New subscriptions

Test Data

Delete Test Data – Allow to delete test data

View Test Data – View test data lists

View Test Data File - View or download test data files

User Management

Add Users – Allow creating new users in system (Add users under People tab)

Assign Roles – Allow assigning of roles to users

Delete Users - Allow to delete users

Edit Users - Allow to edit user details

Edit Users without Tech – Edit user details without being able to modify the techld. This allows local supervisors/managers to update details for their technicians including organization association, but without mistakenly modifying the corporate-mandated personnel IDs (mapped to techld in StrataSync).

Import Users – Import users in bulk (People tab - file upload)

Manage Additional Visibility – Manage additional visibility organizations for users

Manage Roles – Manage(create/edit/delete) user roles

Move Users – Move users to another organization

Reset Password – Reset password for user (Reset Password link in user details)

View Users – View list of users (People List under People tab)

Organizations

This chapter covers how to use the Organization Management features of StrataSync, including the following:

- "Organizations" on page 172
- "Searching and sorting" on page 173
- "Organization List" on page 176
- "Importing organizations" on page 186

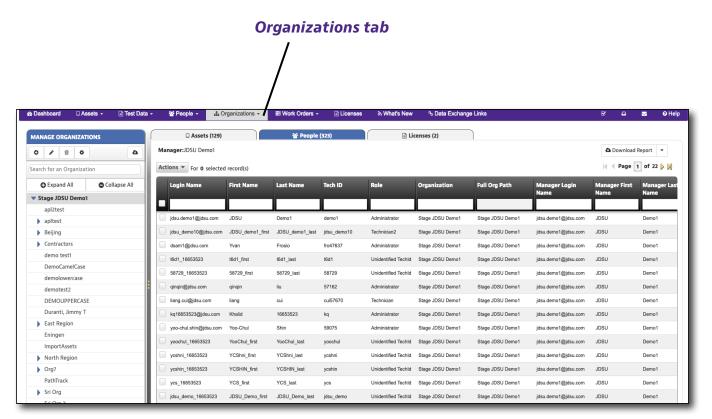

Organizations

The **Organizations** tab is the hub for all of the organization and suborganization management features of your StrataSync account, including: adding, editing, moving, deleting, and importing organizations.

Click the **Organizations** tab in the Main menu to bring up the Organizations dropdown.

Organizations dropdown menu

Organizations List selected from the Organizations tab

Searching and sorting

From the Organization List, you can easily find an asset, person, or license using the search bar under each of the column headers or the sorting filters.

Searching

You can search by typing into the search bar under a column header. The list updates with the results.

Some of the columns provide dropdowns with releveant options once you start typing.

		Sear	ch bar
Login Name	First Name	Last Name Tee	:h ID
east.tech1@jdsu.com	East	5800 tech_last	_tech1
west.tech1@jdsu.com	West	Atha	_tech1
south.tech1@jdsu.com	South	Berkshire	h_tech1
north.tech1@jdsu.com	North	Chapman Chwalek	1_tech1
east.tech2@jdsu.com	East	default tech_last	_tech2
		DemoTech	

Although the Organization List doesn't have Views like other lists, the filters work similarly. To remove the filter from the search bar, click the (x) to remove the filter.

Scroll to the right to reveal more detail, including Manager's Name and Last Login Date.

Filtering multiple items

The Role column allows you to select multiple items to filter at the same time (e.g. filter Firmware Tester and Admin only). When ready, select **Apply**.

To remove the filter from the search bar, click the (x) to remove the filter.

NOTE:

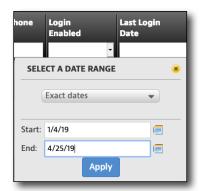

Remo

Remember when using filters to make sure the columns that you don't want included are blank, so the search results are not affected by them.

Date filters

The Last Login Date column allows you to use the dropdown or calendars to filter by date or date range. Click the search box to bring up the date filter dropdown. When ready, select **Apply**.

To remove the filter from the search bar, click the (x) to remove the filter.

Sorting

You can also easily sort the columns by clicking the column header arrows to sort by ascending / descending values. Toggle through the options to remove the sort.

If you have multiple columns selected, you can also set the priority of how the columns themselves are sorted.

Organization List

This feature allows you to manage assets, people, licenses, and the organization and any suborganizations as a whole.

Select the **Organizations** tab, and then select **Organization List**. The Organization List screen appears.

Right away, you will notice that the screen is separated into 4 tabs: Manage Organizations, Assets, People, and Licenses.

Organization List, with the People tab selected

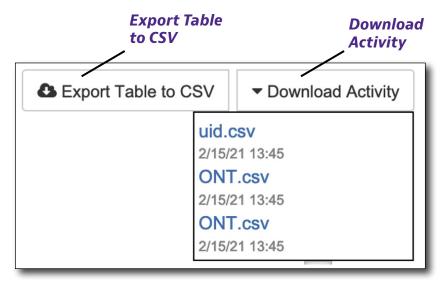

Exporting lists to CSV

On all list pages (Assets, Test Data, People, Organizations, Work Orders and Licenses), you can download your current list view using the **Export Table to CSV** button.

Use the **Download Activity** dropdown to see the list of files downloaded from the browser over the last 7 days as a result of clicking the **Export Table to CSV** button, or from the Test Data list view downloaded from the **Actions** button dropdown.

When ready, a popup will ask where you want to save the file.

Please note that to provide better UI responsive and overall system performance, users cannot initiate another download action until the previous one has completed.

Exporting data to CSV

Manage Organizations tab

Adding organizations

From the Organization List screen, select the **Add** button at the top of the **Manage Organizations** tab. The Add Organization screen is displayed.

On the right, select the parent organization.

Enter the name for the new organization and the manager account name for this org. The name must already be in the system at this point. When done, click **Save and Done**.

The new organization will appear in the list.

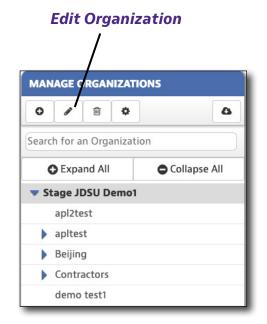

Add Organization MANAGE ORGANIZATIONS 0 圇 ø 8 . Search for an Organization Expand All Collapse All 🔻 Stage JDSU Demo1 apl2test apltest Beijing Contractors demo test1

NOTE:

Before deleting an organization, all associated sub organizations, users, assets, and templates must be deleted or moved to other organizations.

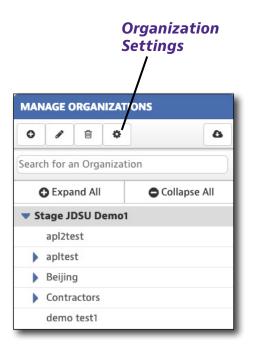

Organization Settings

This feature allows you to customize your Test Process Automation, anti-theft, documents, template auto deploy, Mobile Tech, and job template auto deploy settings.

This allows you to tailor these settings by asset type instead of using the system settings or parent organization settings.

From the Organization List screen, select the organization you want to edit under the **Manage Organizations** tab, then select the **Organization Settings** button at the top. The Organization Settings screen is displayed.

Edit the information as needed and click **Done**.

Enable TPA	Template Auto	Deploy Settings	
Anti-Theft Documents	Use below set organizations	ttings for this organization and	its sub-
Template Auto Deploy Settings			
Mobile Tech Settings Job Template Auto Deploy Settings	Asset Type	Template Name	Enable
	DSAM	Brian's DSAM Templ	V

NOTE: See the Test Process Automation User Guide for details on TPA settings.

IMPORTANT:

The parent organization uses system-wide settings. To adjust settings per organization, select another organization or sub-org below the parent organization.

Mobile Tech settings and custom documents

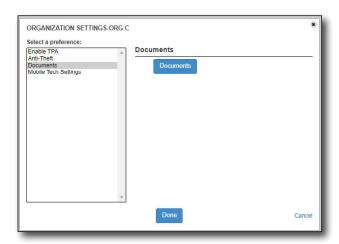

Previously, StrataSync licensed accounts could define centralized settings to control VIAVI Mobile Tech app configuration for thousands of technicians, as well as contain customized documents (e.g. testing methods and procedures guides) technicians could view/download via the Mobile Tech app.

Now, account administrators can define these settings at the per-organization level.

(The Enable organization settings override system settings checkbox needs to be checked under System Settings > Organization Settings). See "Organization settings" on page 236.

select a preference: General Security Notifications What's New Lease Company Anti-Theft Measurement Units Asset Management Calibration Due Organization Settings POP Report Limits Firmware Management Template Settings Failed Test Notification	Organization Settings
---	-----------------------

For Custom Documents, any documents uploaded for higher-level organizations will also be available at lower-level organizations, so only upload documents at higher-level orgs that should be accessible for everyone. Upload documents at lower-level orgs to target specific workgroups.

For Mobile Tech Settings, setting **Use below settings for this organizion and sub-organization...** at the per-organization level, overrides any settings at a higher-level organization.

The standard mobile tech settings capability (now including perorganization settings) is only supported for customers with nonexpired SS-PRO, SS-ANALYTICS or SS-ENT-WRKFLW subscription plans.

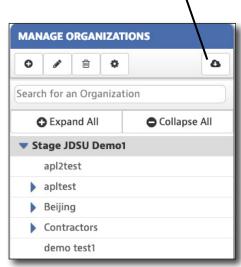

Select a preference: Enable TPA	*	Mobile Tech Settings	
Anti-Theft Documents Mobile Tech Settings	-	Use below settings for this organization and its su organizations instead of the system settings or pa organizations settings.	
		Use Cellular Data	
		Send Usage Reports	
		Enable Diagnostic Logging	
		Set Incoming Job As the Current Job	
		StrataSync Upload Automatic -	
		Auto Purge Jobs Time Manual	
	_		
	-		

Downloading organization data

From the Organization List screen, select the organization or suborg you want to download data for under the **Manage Organizations** tab, then select the **Download Organization List** button at the top.

Choose where you want to save the file.

Download Organization List

Assets tab

Using the **Assets** tab from the Organization List is similar to details covered previously. See "Assets" on page 63.

People tab

Using the **People** tab from the Organization List is similar to details covered previously. See *"People" on page 137*.

Licenses tab

Using the **Licenses** tab from the Organization List is similar to details covered later in this guide. See "*Licenses*" on page 215.

Organization List, with the People tab selected

Importing organizations

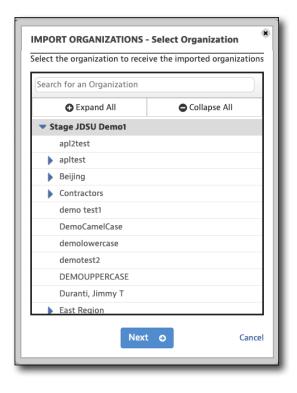

This section details how to import organization hierarchy from a CSV file.

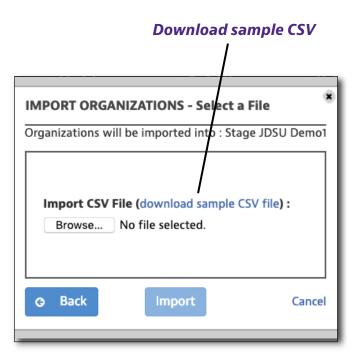

- Select the **Organizations** tab, and then select *Import Organizations*. The Import Organizations screen appears.
- 2. Select the parent organization you want to import to, and click **Next**. The Select File screen appears.
- 3. To download a sample CSV file already formatted for StrataSync, select **Download sample CSV file**.

Make sure you retain the header row and enter the data fields starting on row 2. See the sample file for more information.

4. Select **Browse** and choose the file you want to import, then select **Import**.

The organization will be imported into the hierarchy.

Importing changes for organizations

If you have bulk changes to update for organizations, the steps are similar to importing new organizations.

Edit the CSV as needed, (updating the fields that have changed), and reimport the file as before. This includes organization changes, roles, etc.

Work Orders

This chapter covers how to use the Work Order Management features of StrataSync, including the following:

- "Work Orders" on page 190
- "Searching and sorting" on page 191
- "Views" on page 194
- "Importing job templates" on page 204
- "Deploying job templates" on page 206
- "Automatic template deployment and artifact linking" on page 208
- "CATV, Fiber, Other Work Orders, and Audit Templates" on page 213

Work Orders

The **Work Orders** tab is the hub for all of the work order management features of your StrataSync account for your field instruments, including: CATV, Fiber, Other work orders, Audit templates, and Job templates.

Work order is a term historically (and still) used by customer billing and technician dispatch systems to describe a planned/scheduled appointment, typically for a single technician and typically for service activation or customer site service visit. "Work order" is used by VIAVI for CDM 2.1. See the StrataSync API Guides for details (*Test Results* and *Generic Workflow*).

Click the **Work Orders** tab in the Main menu to bring up the Work Orders dropdown.

NOTE:

The tabs in the Main menu are dependent on the options available for your StrataSync account. See your VIAVI sales representative for more information.

Search bar

Remove all

Searching and sorting

From the Work Order's CATV, Fiber, Other workorders, and Audit Templates, you can easily find a work order using the search bar under each of the column headers or the sorting filters.

Searching

You can search by typing into the search bar under a column header. The list updates with the results.

Make sure to include hyphens for product names, etc., (e.g. T-BERD 2000).

Some of the columns provide dropdowns with releveant options once you start typing.

|∢ ∢ Page 1 of 1 ▶ ▶|

Filtering multiple items

The Status and Pass/Fail Status columns allow you to select multiple items to filter at the same time (e.g. filter Closed and Rescheduled status only). When ready, select **Apply**.

Again, the filter criteria is listed under the Current Filters section on the left. Click the (x) to remove the filter. You can also click (x) to remove the filter from the search bar.

NOTE:

Remember when using filters to make sure the columns that you don't want included are blank, so the search results are not affected by them.

Date filters

The Scheduled Date and Created Date columns allow you to use the dropdown or calendars to filter by date or date range. Click the search box to bring up the date filter dropdown. When ready, select **Apply**.

Again, the filter criteria is listed under the Current Filters section on the left. Click the (x) to remove the filter. You can also click (x) to remove the filter from the search bar.

Schedu	led Date	Customer A No	ccount
SELE	CT A DATE RA	NGE	<u>×</u>
	Exact dates		-
Start:	1/24/19		
End:	4/25/19		
	Ар	ply	

NOTE: You can save custom filters to a favorite view for easy reference. See "Saving views" on page 195.

Sorting

You can also easily sort the columns by clicking the column header arrows to sort by ascending / descending values. Toggle through the options to remove the sort.

If you have multiple columns selected, you

can also set the priority of how the columns themselves are sorted.

Views

Customizing views

StrataSync gives you the ability to customize your list views.

 Select the Work Orders tab, and then select CATV Work Orders, Fiber Work Orders, or Other Work Orders.

The corresponding Work Order List appears.

2. Select **Customize view** at the upper left of the screen.

Note: Once a shared view is created, it cannot be edited. You need to create a new one and delete the old one.

Work Order List

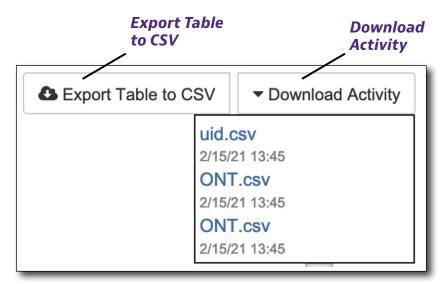

Exporting lists to CSV

On all list pages (Assets, Test Data, People, Organizations, Work Orders and Licenses), you can download your current list view using the **Export Table to CSV** button.

Use the **Download Activity** dropdown to see the list of files downloaded from the browser over the last 7 days as a result of clicking the **Export Table to CSV** button, or from the Test Data list view downloaded from the **Actions** button dropdown.

When ready, a popup will ask where you want to save the file.

Please note that to provide better UI responsive and overall system performance, users cannot initiate another download action until the previous one has completed.

Exporting data to CSV

Assigning a work order to an organization

Assigning work orders from the Work Order List is similar to how you assign assets from the Holding Bin.

StrataSync supports assigning generic and cable work orders to an organization instead of a technician via the UI. For cable workorders, this is achieved via the **Work Orders > CATV Work Orders** view. For generic workorders of type 'viaviJob', this is achieved via the **Work Orders > Other Work Orders** view. Other work order types are not supported (e.g. 'fiberJob').

This functionality allows a user with the appropriate permissions the ability to assign/reassign a workorder to an organization which could represent a sub-organization, regional team or even a contractor group – this then allows an admin user within that organization to later assign the work order to one of their technicians. Therefore, this functionality allows hierarchical multi-step workorder assignments from 'higher' organizations (who may not know or have the authority to assign to specific technicians, but know which sub-organization is supposed to complete the work order) to more focused 'lower' organizations (who can assign to individual technicians).

Work orders can also be created initially via the Cable Workflow JSON API (technician assignment-only) or Generic Workflow JSON API (organization or technician assignment), and then reassigned via the UI.

Please note that work orders still require assigning to a technician for deployment to the test instrument.

Also note that the introduction of this functionality is the first time cable work orders can be assigned/re-assigned via the UI to technicians or organizations.

StrataSync User Guide 22132842 Assign to me

- 1. From the Work Order List, select a work order (or orders) by clicking the checkbox to the left of the item.
- 2. Right-click the item (or use the **Action** dropdown) and select **Assign.** The Technican Assignment screen appears.
- 3. Select the organization and a user, then click the **Assign to Organization** button at the bottom.

When you navigate the organizations section on the left and select a specific organization ("ZTel" in this example), the **Assign** button text changes to reflect the current selection (in this case **Assign to Organization: ZTel**).

You can still assign to technicians by selecting a technician in the currently selected organization, in which case the assignment button text will change to reflect the 'techld' of the selected technician (e.g. **Assign to Techld: 57311**). When you assign a workorder to an organization, the 'State' of the workorder is changed to "STARTED".

If you assign a workorder to a technician, the 'State' of the workorder is changed to "ASSIGNED".

4. Whenever you assign a work order via the UI, a warning popup window will display indicating that by reassigning a work order which is already deployed or in-progress, you will remove that original assignment or reset the workorder compliance if in-progress with already uploaded test results. Select **Yes** to confirm.

		٠
Some	Workorders may already be in Deployed or In Progress state. Do you wish to p	roceed ?
	Yes	No

NOTE:

You can also assign the work order to yourself by selecting Assign to me at the top right corner.

In the example below, the workorder "JOBMJP7MAYCATV003" has been assigned to an organization and the 'State' has been set to "STARTED". This workorder would require further assignment to a technician before it could be deployed to a test instrument.

	5/7/21	JOBMJP7MAYCATV003	676,664	viaviJob		STARTED		0 of 3				0	

Users can always review per-work order who/what created the work order via the 'Created By' column (e.g. "APIClient"), as well as the most recent modifier via the 'Modified By' column (e.g. "System" or the username of the user assigning via the UI).

Up to ten work orders can be assigned to an organization at a time. Customers must be licensed for workorder integration to utilize this capability (either ANALYTICS or ENTERPRISE WORKFLOW subscription plans or legacy workorder integration licensing).

Canceling, re-activating or deleting a work order

This capability allows a user with the appropriate permissions, to cancel workorders of types 'viaviJob' (from the **Work Orders > Other Work Orders** view), and 'fiberJob' and 'swissAssignment' (from the **Work Orders > Fiber Work Orders** view). Canceling a workorder removes all workorder compliance from being performed and allows these workorders to be filtered using the 'State' value of "CANCELLED".

Cancelled workorders can be re-activated, in which case work order compliance is re-run against the current set of associated uploaded test results or can be permanently deleted.

Cancelling and re-activating work orders requires the 'Edit Work Orders' permission, and deleting workorders requires the 'Delete Work Orders' permission. See "Job Management (Previously Work Order Management)**" on page 167.

Please note these actions can only be performed one work order at a time.

- 1. From the Work Order List, select the checkbox next to the work order you want to cancel.
- 2. Right-click the item (or use the Action dropdown) and select Cancel Work Order.
- 3. A confirmation screen asks you to confirm. Click Confirm.

Once a work order has been cancelled, it can be re-activated or deleted. Right-click the work order (or use the **Action** dropdown) to select those options.

In the example below, the work order "JOBMJP10MAYCATV003" is selected and the **Cancel Workorder** action selected.

											Export Table to CSV		ty

Importing job templates

This section details how to import CDM 2.1-compatible job templates from a JSON file. A job template is associated to an organization and can only be deployed to assets that belong to that organization and its sub-organizations.

- 1. Select the **Work Orders** tab. From the dropdown, choose *Job Templates*. The Template List screen appears.
- 2. On the right side, select **Import.** The Import Job Templates screens appears.

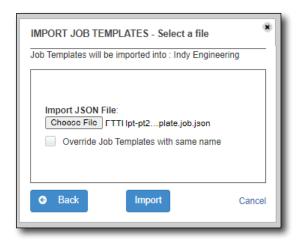

Strat	taSync™		L	DSU Main	•		Account ID 9976543210
Asabbaard Analytics		all	L Organizations -	E Work Ordens -	Image: Control of Contro	• Data Exchange Lisks fied On Modified By	(Reconcised Production (Production (Productit))))))))))))))))))
	<						

Job template import

- 3. Select the organization, then click **Next**.
- 4. Select **Browse** and choose the file you want to import, then select **Import**.

The job template will be imported into the Job Templates List.

If you want to replace job templates with the same name, select the **Override Job Templates with same name** checkbox.

NOTE:

For templates used in Test Process Automation, you may want to name CDM 2.2 templates differently than those used for CDM 2.1. See the TPA User Guide for more details.

Deploying job templates

To deploy a job template, right-click the template on any menu and select **Deploy** from the dropdown (or use the **Actions** menu). The Deploy Select Assests screen is displayed.

Job Templates list

Important: Importing a job template to a specific organization within a StrataSync customer account will automatically enable visibility of that template to all VIAVI Mobile Tech app users associated with that organization or sub-organization (or that have visibility permissions).

So importing a job template implicitly 'deploys' it based on techld association to an organization for use with Mobile Tech—this doesn't prevent an admin deploying the job template specifically to assets, but could be used instead of this method if all techs connected their instruments via Mobile Tech.

This supports 1 intended and one 'side-effect' use-case:

Job templates intended for multi-instrument type usage and instruments typically managed via Mobile Tech can be implicitly deployed based on Tech ID association to organization.

Even single-instrument type job templates can be 'deployed' to Mobile Tech by simply uploading them to a specific directory. Providing technicians connect their instrument to Mobile Tech, they can use the template on Mobile Tech to create jobs to share with the instrument. This alleviates an admin from having to specifically deploy job templates to specific assets/instruments.

Select the assets where you want to deploy the selected template. When done, click **Next.**

Automatic template deployment and artifact linking

Key points

- Templates may be automatically deployed to assets when the template's artifacts have been changed.
- Automatic template deployment is selectable by organization.
- System level permissions are required to enable this capability.
- Users of automatic template deployment should fully understand the organization and template structure of the entire StrataSync account.
- Automatic template deployment is turned off by default.

Steps

- 1. Verify the system permissions
- 2. Enable template auto deployment
- 3. Link artifacts
- 4. Run template reports for verification

Setting permissions

Set the permissions as needed under **System Settings** for the appropriate role and user. For details, see "*Managing user roles*" on page 161.

Permissions granted:

- Asset Management
- 🕀 Firmware Management
- Miscellaneous Permissions
- Organization Management
- System Settings

Manage Artifact Linking Settings

Manage Template Auto Deploy Settings

User Management

Manage Artifact Linking Settings – Allows you to turn on/off artifact linking from Global Archive or templates to other templates

The Enable Configuration Artifact Link from Global Archive or Templates checkbox in System Settings > Template Settings is visible to users with this permission.

Manage Template Auto Deploy Settings – Allows you to turn on/off Template auto deploy settings for the whole StrataSync account

The **Enable Template Auto Deploy** checkbox in **System Settings > Template Settings** is visible to users with this permission.

Template settings

Select **System Settings > Template Settings** to bring up the Template Settings section.

For more details, see "Configuration" on page 228.

This feature allows you to enable configuration template auto deployment and if configuration artifacts link from the Global Archive or templates.

Tem	plate Settings
*	Enable Template Auto Deploy
*	Enable Configuration Artifact Link from Global Archive or Templates

Choose from these options:

- Enable Template Auto Deploy Auto deploy templates to assets in an organization and its suborgs you have set up for specific asset types
- Enable Configuration Artifact Link from Global Archive or Templates Allow parent and child artifact links to be synchronized when changes are made

See "Artifact linking" on page 109.

When finished, click **Done**.

For more detailed information on auto template deployment and artifact linking, contact us at **CATVsupport@viavisolutions.com**.

Organization settings

Select **System Settings > Organization Settings** to bring up the Organization Settings section.

For more details, see "Configuration" on page 228.

This feature allows suborg owners to set some of the system settings for their own organizations.

When finished, click **Done**.

Note: To auto deploy a template to an organization, the template should be located at the selected organization level or above.

Organization Settings

Enable organization settings override system settings

Auto deploy settings

You can set up auto deploy settings for any job template. Right-click the template on any menu and select **Auto Deploy Settings** from the dropdown (or use the **Actions** menu). The Auto Deploy Settings screen is displayed.

Bulk Job Template auto-deploy set up is allowed only if all assets belong to the same organization, otherwise this has to be set up with each job template, one at a time.

When an organization is participating in auto-deploy of job templates, StrataSync makes sure each asset will have templates that are set up for auto-deploy. If an asset uploads a job template that is not participating in auto-deploy then StrataSync will issue all auto-deploy templates. This will remove any unwanted job templates that are not part of auto-deploy.

The options are:

- Use Organization Template Settings for this organization and its Suborganizations – Allows you to override the parent organization's template auto deploy settings
- Enable Auto Deploy for Job Template Allows you to set whether auto deploy is enabled for the selected job template
- Job Template Name

Click **Select Organization** at the top to add more organizations, as needed.

When done, click **Save**.

Deploy Settings		×
nt organizations job temp	late auto deploy settings.	
Enable Auto Deploy for Job Template	Job Template Name	Organization
Save	Cancel	
	aplate Settings for this o nt organizations job temp bb Template- Indicates if t Enable Auto Deploy for Job Template	aplate Settings for this organization and its Sub-organizations job template auto deploy settings. ab Template- Indicates if template auto deploy is end Enable Auto Deploy for Job Template Job Template

Select Organization

Notes:

- Select both check boxes to override parent organization settings and enable autodeploy for asset type.
- Both check boxes need to be checked to enable templates to be auto deployed
- For sub-organizations, if one of the checkboxes is not checked then the parent organizations will determine the template to be auto deployed.

Example of templates to auto deploy to an asset in organization

Consider the following organization hierarchy:

VIAVI

- California
 - San Jose
- Indiana
 - Indianapolis

Template A has been set up for auto-deploy for the full VIAVI organization.

Template B has been set up for auto-deploy for the California organization.

All assets in California and its sub-organizations i.e.; San Jose will always get Template B when modifications are made to Template B.

All assets in VIAVI and Indianapolis will always get Template A when modifications are made to Template A.

Templates will be auto deployed to assets when:

- When an asset is created in an organization using Asset Import or using Assets
 Tab > Add a new asset
- When an asset is created on a StrataSync sync
- When an asset moves into an organization because of a re-assign to another technician
- When a template is renamed
- When a new template configuration artifact is added to the template
- When a template configuration such as limit plan is renamed
- When a template configuration such as limit plan is modified
- When a template configuration is deleted from template section with a "match" policy
- When modifying a configuration such as limit plan that this template configuration is linked to –(only If archive linking is enabled)
- When asset syncs, StrataSync will check if the updated configuration type e.g. channel plan, is part of template used for asset organization auto deploy settings

- If policy on configuration section is "match" it will re-deploy template
- If policy on configuration section is "not match" then it will not re-deploy template

Templates will not be auto deployed to assets when:

- When System Settings > Template Settings > Enable Template Auto Deploy check box is not checked
- When an asset is not associated with auto-deploy template. Note, this can occur for the following reasons:
 - The configuration is edited via asset itself through **Asset Details->View Configuration**.
 - A Global Archive component is deployed directly to an asset
 - Another template is deployed to an asset which is not same as template chosen for auto-deploy template for asset organization or parent

CATV, Fiber, Other Work Orders, and Audit Templates

These features are covered in detail in other documents. Contact us at **CATVsupport@viavisolutions.com** for additional information.

Licenses

This chapter covers how to use the License Management features of StrataSync, including the following:

- "Licenses" on page 216
- "Searching and sorting" on page 219
- "Views" on page 222
- "Software option licensing" on page 225

Licenses

The **Licenses** tab is the hub for all of the license management features of your StrataSync account, including all software options for your field instruments.

The Licenses menu also shows any optional StrataSync entitlements, including: test data API, data retention, workflow, and reporting, etc.

Click the **Licenses** tab in the Main menu to bring up the Licenses menu.

Subscription and support plans

StrataSync subscription plans, options, and support plans provide a consistent, scalable pricing model providing primary asset and test results management capabilities at no cost, while offering value-based additional features associated with annual subscription plans priced per-instrument.

Existing customers with legacy licenses have been migrated to the new plans and codes automatically.

The following table summarizes the updated subscription plans, subscription options, and support options available. Please contact your VIAVI sales representative for more details.

		Subs	cription Plans		Suppor	t Plans

Subscription and Support Plans, with new license codes

The existing Licenses List view now supports these new license codes, makes the **Catalog Number** column a default displayed column, and introduces two new default columns, **# of Instruments** and **Expiry Notification Emails**. See the screenshot below for an example.

See "Customizing views" on page 222 to show the columns, as needed.

License Type	Organizat	Full Org Path	Expiration Date	Expiry Notification Emails	Available Data	Total Data	Data Retention	Customer PO#	Catalog Number	# of Instruments

New licensing and expiry detail in Licenses List view

Expiry notifications

The new license codes additionally support expiry notification emails per-subscription plan/subscription option/support plan license. They are configured by default, so please inform your VIAVI sales representative at the time of order if you do not want to receive these notifications. Expiry notification emails are sent at:

- 3 months prior to the expiry date
- 2 months prior to the expiry date
- 1 month prior to the expiry date
- Every week thereafter until the expiry date

By default, the email used is associated to the manager of the organization which holds the license so it is important that the manager is a user profile with a valid email address.

In addition, at the time of ordering, customers can provide additional email addresses for notification purposes – it is recommended that these email addresses are email groups, not individual email addresses, e.g. "purchasing@customerdomain.com".

Any additional emails provided can be viewed in the **Expiry Notification Emails** column. Please contact VIAVI TAC to modify these emails or to stop expiry notification emails for one or more specific licenses.

Searching and sorting

From the Licenses List, you can easily find a license using the search bar under each of the column headers or the sorting filters.

Searching

You can search by typing into the search bar under a column header. The list updates with the results.

Some of the columns provide dropdowns with releveant options once you start typing.

	Search ba	ar

Licenses List

Filtering multiple items

The Expiration Date column allows you to select multiple items to filter at the same time (e.g. filter API Access and Plus license types only). When ready, select **Apply**.

Again, the filter criteria is listed under the Current Filters section on the left. Click the (x) to remove the filter. You can also click (x) to remove the filter from the search bar.

NOTE:

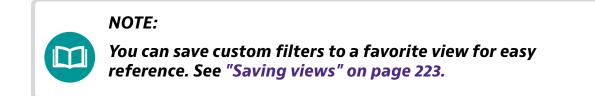

Remember when using filters to make sure the columns that you don't want included are blank, so the search results are not affected by them.

Date filters

The Expiration Date column allows you to use the dropdown or calendars to filter by date or date range. Click the search box to bring up the date filter dropdown. When ready, select **Apply**.

Again, the filter criteria is listed under the Current Filters section on the left. Click the (x) to remove the filter. You can also click (x) to remove the filter from the search bar.

Expirat	ion Date	Available Data	Tot
SELE		NGE	×
	Exact dates		•
Start:	1/24/19		
End:	4/25/19		
	Ар	ply	

Sorting

You can also easily sort the columns by clicking the column header arrows to sort by ascending / descending values. Toggle through the options to remove the sort.

License Type	1	Organization	2
API Access, Plus			

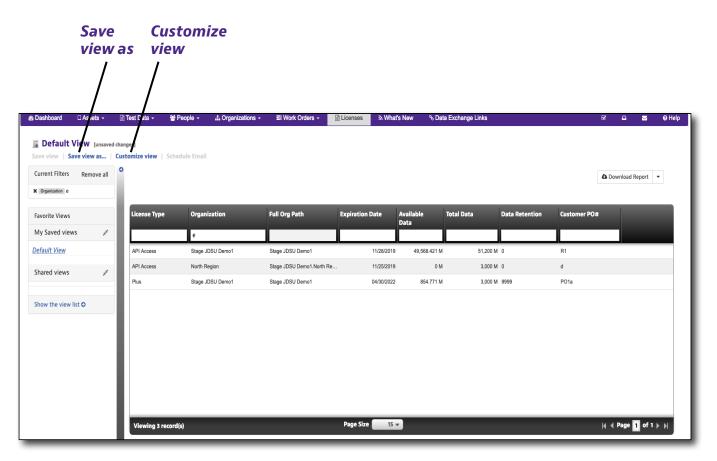

If you have multiple columns selected, you can also set the priority of how the columns themselves are sorted.

Views

Customizing views

StrataSync gives you the ability to customize your list views.

- 1. Select the **Licenses** tab. The Licenses List appears.
- 2. Select **Customize view** at the upper left of the screen.

Licenses Default View

- 1. The Customize View screens appears.
- In the left column, you will see the asset types. Click the plus (+) to expand the attributes associated to the asset type. The right column shows the attributes already included in the view list.
- 3. Select an attribute, then use the arrow buttons to add or remove attributes to adjust the view list on the right.
- 4. When done, click **OK**.

Columns Account ID Account Name Available Data Catalog Number Created By Created On Customer PO# Data Retention Demo Account Description Expiration Date	License Type Organization Full Org Path Expiration Date Available Data Total Data Data Retention Customer PO#	*

Saving views

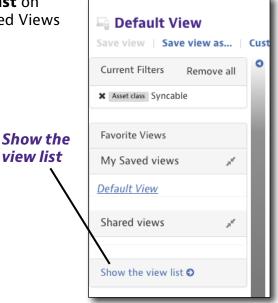

- From the Licenses List, select Save view as... at the upper left of the screen. The Save View As screens appears.
- 2. Enter a view name, select your sharing options, and choose whether you want to make it a favorite or default view.
- 3. When done, click **Save**.

The new view is listed under the Favorite Views section on the left.

SAVE VIEW AS		
View Name	Test 1	
This view is:	Not Shared 🔻	
Make this a favorite	~	
Set as Default View		
	Save	Cancel

Sharing and editing views

1. From the Licenses List, select Show the view list on the left side of the screen. The Saved and Shared Views screens appears.

2. Choose whether you want to share a view or not, make a favorite, a default, rename, or delete.

3. When finished, click Done .	
---------------------------------------	--

License List

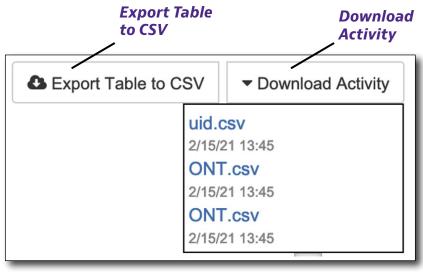

Exporting lists to CSV

On all list pages (Assets, Test Data, People, Organizations, Work Orders and Licenses), you can download your current list view using the **Export Table to CSV** button.

Use the **Download Activity** dropdown to see the list of files downloaded from the browser over the last 7 days as a result of clicking the **Export Table to CSV** button, or from the Test Data list view downloaded from the **Actions** button dropdown.

When ready, a popup will ask where you want to save the file.

Please note that to provide better UI responsive and overall system performance, users cannot initiate another download action until the previous one has completed.

Exporting data to CSV

Software option licensing

Much of the licensing for software options are tied to individual assets, so these features are covered previously in the Assets chapter, including reporting, assigning options to assets, and reallocating licenses to other organizations, etc.

See "Assets" on page 63.

Configuration

This chapter covers how to configure the StrataSync system, including the following::

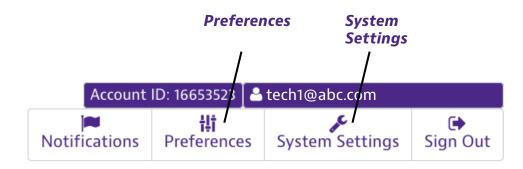

- "Configuration" on page 228
- "Preferences" on page 228
- "System Settings" on page 232

Configuration

The **Preferences** feature allows you to configure your user preferences, including general appearance, language, security, notifications, measurement units, and dashboard settings.

The **System Settings** feature allows StrataSync administrators to configure the overall system, including security, asset management, organization, firmware management, and configuration template settings.

On the top right side of the screen, select **Preferences i** or **System Settings i** from the Main toolbar, as shown below. The corresponding menu is displayed.

Preferences

On the left side of the screen is the **Preferences Panel**, with several categories of user preferences. Select one to show the options on the right.

eferences nel	General Security Notifications What's New Sweep Settings Measurement Units Dashboard	General Lines Per Page: Date format: Time format: Language:	15 MM/DD/YY 24 hour English

System Settings, with General selected

General

Select **General** to bring up the General section.

This feature allows you to set the first day of the week, date and time formats, and inactivity timeout when user's need to log back in.

When finished, click **Done**.

General preferences			
First day of the week:	Monday	•	
Date format:	MM/DD/YY	•	
Time format:	24 hour	•	
Inactivity timeout:	8 hours	•	

NOTE:

Only StrataSync administrators or users with permission can make changes to System Settings, as they are site wide.

Security

Select **Security** to bring up the Security section.

This feature allows you to set up password strength requirements.

When finished, click **Done**.

Security Preferences

Minimum password length (6 - 10) 6 🚔

- Require both upper and lower case
- Require at least one number
- Require at least one special character !#\$%-_=+<>

Recommended best practice:

A minimum password length of at least 8 characters, enabling 'Require both upper and lower case', and enabling 'Require at least one number' are recommended.

Notifications

Select **Notifications** to bring up the Notifications section.

This feature allows you choose what system-wide event notifications are available and for how long.

When finished, click **Done**.

Notifications	
Tothications	

Notification Life: 31 days Select events to make available: Asset Events Configuration Events Notable Dates Organization Events System Events Template Events User Created

User Events

What's new

Select **What's New** to bring up the What's New section.

This feature allows you choose what system-wide application events and announcements are available.

When finished, click **Done**.

What's New			
Sele	Select What's New subscriptions:		
	Capacity Advisor

Anti-Theft

Select **Anti-Theft** to bring up the Anti-Theft section.

This feature allows you to manage anti-theft measures for your instruments and whether they can sync data to StrataSync.

When finished, click **Done**.

Note: This feature is dependent on the instrument and may not be available for all products.

nti-Theft							
pply Anti-Theft settings to the following instrument types							
Asset Type	Enable Anti-Theft	Days	Power Cycles				
CellAdvisor 5G							
CellAdvisor BSA		1	2				
CellAdvisor CAA		1	2				
CellAdvisor RFA							
CellAdvisor SA							
DSAM		7	3				

Measurement units

Select **Measurement Units** to bring up the Measurement Units section.

This feature allows you to choose how instrument measurement files and configuration editors are shown in StrataSync system wide.

When finished, click **Done**.

Measurement Units							
Configure measurement units:							
Signal Level Units:	dBmV	•					
Signal Quality Units:	MER	•					
Hum Units:	%	•					
Distance Units:	Feet	•					

Asset management

Select **Asset Management** to bring up the Asset Management section.

This feature allows a new asset to bypass the holding bin and move directly to the inventory, assigned to a specified Tech ID.

Note: You will need to create the Tech ID if it doesn't already exist in StrataSync.

Asset Manage	
Auto-Move to	
Enable auto	o-assign of assets without a Tech ID to
Tech ID	111947
Enable aut	o-assign of assets with unidentified Tech ID to
Tech ID	

Without this option, the asset will be placed in the holding bin and manual management is required to move it to the inventory.

Choose one of these options:

- Enable auto-assign of assets without a Tech ID Assets that have not been assigned a Tech ID are automatically assigned to the specified Tech ID
- Enable auto-assign of assets with unidentified Tech ID Assets with unidentified Tech IDs get auto assigned to the specified Tech ID

When finished, click **Done**.

For more details, see "Unidentified Tech ID role" on page 164.

Calibration due

Select **Calibration Due** to bring up the Calibration Due section.

This feature allows you to set calibration intervals for assets system wide.

When finished, click **Done**.

onfigure Calibration D	Oue times:
AssetType	Calibration Due (months)
124	12 Default
135	12 Default
AVX-10K	12 Default
BERT 40G/100G TM6	12 Default
BERT CSAM1	12 Default
BERT MSAM1	12 Default

Organization settings

Select **Organization Settings** to bring up the Organization Settings section.

This feature allows suborg owners to set some of the system settings for their own organizations.

Select the **Enable organization settings override system settings** checkbox.

When finished, click **Done**.

Organization Settings

Enable organization settings override system settings

POP report limits

Select **POP Report Limits** to bring up the POP Report Limits section.

This feature allows you to configure POP report limits for applicable instruments.

When finished, click **Done**.

figure POP Report Limit	ts:	Restore To Default
24 Hour Deviation(dB):	+8.0	
Maximum Adjacent Channel(dB):	+3.0	
Maximum Analog Delta Video(dB):	+10.0	
Analog Delta Video Offset(dB):	+1.0	
Maximum Digital Delta Video(dB):	+10.0	
Digital Delta Video Offset(dB):	+1.0	
Minimum Video Level(dBmV):	+3.0	

Firmware management

Select **Firmware Management** to bring up the Firmware Management section.

This feature allows you to manage firmware versions for your assets, including options to only show approved firmware and to auto deploy the firmware.

To enable firmware management, select the **Show only approved firmware versions in Upgrade Firmware functionality** checkbox. This will enable the **Manage Firmware Versions** button below, as well as the corresponding button on the Main Dashboard.

Select Enable Firmware Auto Deploy, if necessary.

Select **Manage Firmware Versions** and choose an asset to see available firmware. For details, see "*Managing firmware versions*" on page 40.

When finished, click **Done**.

Manage Firmware Versions

Template settings

Select **Template Settings** to bring up the Template Settings section.

This feature allows you to enable configuration template auto deployment and if configuration artifacts link from the Global Archive or templates. Template Settings

- Enable Template Auto Deploy
- Enable Configuration Artifact Link from Global Archive or Templates

Choose from these options:

- Enable Template Auto Deploy Auto deploy templates to assets in an organization and its suborgs you have set up for specific asset types
- Enable Configuration Artifact Link from Global Archive or Templates Allow parent and child artifact links to be synchronized when changes are made

When finished, click **Done**.

For more detailed information on auto template deployment and artifact linking, see *"Automatic template deployment and artifact linking" on page 208* or contact us at **CATVsupport@viavisolutions.com**.

Mobile Tech settings

Select **Mobile Tech Settings** to bring up the Mobile Tech Settings section.

This feature allows you to consistently configure the VIAVI Mobile Tech app across a large fleet of technicians for accounts configured for this capability. The settings are applicable for all Mobile Tech users associated with the StrataSync account.

Choose from these options:

• Enable Mobile Tech Settings – Allow the Mobile Tech app settings to be managed by StrataSync

When enabled, any user logging into the Mobile Tech app will see the common settings grayed-out and a yellow banner stating "Settings Managed By StrataSync".

- Use Cellular Data Allow Mobile Tech to use cellular data as well as WiFi
- Send Usage Reports Send reports to StrataSync
- Enable Diagnostic Logging Allow diagnostic logging for advanced troubleshooting
- Set Incoming Job as the Current Job Set the incoming job as the default current job
- Enable App2App Workorder Allows a work order push from a customer mobile app to Mobile Tech
- **Sync Time** Sets the interval Mobile Tech syncs to StrataSync
- Auto Purge Jobs Time Sets the frequency jobs are purged from the system
- Manage Data Upload by Servers Allows Mobile Tech to share test data directly to a customer server via API
- Manage Data Sync for AssetType Allows Mobile Tech to share test data directly to a customer mobile app and server via API

When finished, click **Done**.

For more details, see the *Mobile Tech Generic App to App Integration Developer Guide* and the *Generic Direct Test Results Server Upload Integration Developer Guide*.

Contact us at CATVsupport@viavisolutions.com.

Failed test notification

Select **Failed Test Notification** to bring up the Failed Test Notification section.

This feature allows you to enable email notifications for failed test results uploaded to StrataSync accounts configured for this capability.

We'll cover the main aspects of this feature in the next few pages.

When finished, click **Done**.

Failed Test Notification						
 Enable Failed Test Notification 						
 Include link to failed test record(s) 						
 Attach failed test record(s) 						
Email "Subject" field: Tech follow-up: failed test upload						
Apply failed test notifications to the following test types:						
JSON REPORT	*					
JSON REPORT.Continuity						
JSON REPORT.FCOMP						
JSON REPORT.OTDR						
Kabeldiagnose Test						
L1 Optics Test						
Leakage ScreenShot						
Level	-					

Please note that due to the nature of this functionality and applicability to potentially all technicians within a given StrataSync account, and the fact that multiple supervisor/admin users may be monitoring the same technician, it is imperative that correct email addresses be provisioned for the supervisor/admin users who select one or more technicians to monitor for failed tests. Any customer account which generates a significant % of bounced bad email address messages may be temporarily have this feature deactivated.

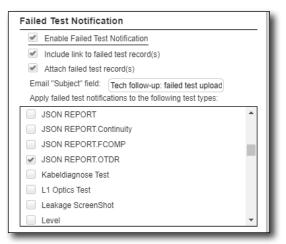

This feature allows technician supervisors, or any StrataSync user with the 'Edit Users' permission and associated with the same organization as the technician (or a parent organization), to monitor one or more technicians for failed tests of configured test types.

To view the actual failed test results file, the supervisor would additionally need the 'View Test Data File' permission. If multiple failed test results files are uploaded by the technician in a single sync session to the StrataSync server, then these failed files are typically consolidated into a single email notification. There are three main areas of configuration:

- Configuring the overall system settings for failed test email notifications
- Configuring the test types to trigger email notifications
- Configuring the technicians to monitor

Configuring the overall system settings for failed test email notifications

The 'Enable Failed Test Notification' control enables or disables this functionality for the whole StrataSync account. When enabled, failed tests matching the configured test types for monitored technicians uploaded afterwards will generate email notifications. When disabled, all email notification for failed tests is prevented. Please note, while the functionality is disabled, StrataSync will not buffer/store failed test email notifications, so any failed tests uploaded during the disabled time period will not generate email notifications, even after the functionality is enabled.

Optionally, a link to the failed test results files on the StrataSync account and/ or attaching the results files to the email notification can be configured. VIAVI recommends that including a link ensures rapid email notification without exceeding your email size limitations and clogging up your inbox with large emails. Note however, due to the nature of many commercial email systems, it may take several minutes for the email to appear in your inbox after the failed test (or tests) was/were uploaded to StrataSync. Email attachments are useful however for users of mobile devices in the field who need a rapid assessment of the condition.

In addition, the email subject field can be configured from the default "Failed result uploaded".

Configuring the test types to trigger email notifications

In the previous screenshot, the final control in the System Settings for Failed Test Notification is to configure which test types will trigger email notifications. Depending on the VIAVI test instruments in use within your StrataSync account, there may be hundreds of test type options. Remember that for some test types, such as fiber inspection, it may be quite common to experience failed tests, so careful selection of the test type to match your business requirements is essential to prevent excessive email notifications being sent. VIAVI recommends that customers configure only principle test types (i.e. those that drive your compliance metrics) such as 'JSON REPORT.OTDR' (but not associated fiber inspection), 'TrueSAM' and 'onechecksessionexpert.json' test types are configured for failed test email notifications.

As some customers represent large organizations which manage multiple suborganizations managing different technician workgroups with different responsibilities and testing different technologies, the test types which trigger email notifications can be additionally configured at the organization level (see screenshot below).

In the Organizations tabs, when selecting the organization of interest, and clicking the gear/cog settings icon, there is a new 'Failed Test Notification' section which allows you to override the system settings for test types, and instead choose different test types. So, for example, one organization responsible for CATV service activation may configure 'onechecksessionexpert.json', and another organization handling fiber construction in the outside plant may configure 'JSON REPORT.OTDR'.

ORGANIZATION SETTINGS-Contra	actor A	
Select a preference:		
Anti-Theft	Failed Test Notification	
Failed Test Notification	Use below settings for this organization and its sub- organizations instead of the system settings or parent organizations settings.	
	Apply failed test notifications to the following test types:	
	ADSL	
	Auto Test - Video Channels	
	AutoTest - Cable Modern	
	AutoTest - Combo	
	AutoTest - Video Channels	
	BIDIR-OTDR	
	Cable Diagnostics Test	
	Cable Test	
	channelcheck	
*	channelcheck.json	-
	Done	Cancel

Configuring the technicians to monitor

Each user who wishes to monitor one or more technicians, must log into their company's StrataSync account and have an associated user profile which includes the 'Edit Users' permission. To check this, you can click your username icon in the top-right of the StrataSync web browser window/tab and review your user role and permissions. To monitor one or more technicians for failed tests, select their associated checkbox in the People tab 'People list' and select 'Turn ON failed test notifications' from the 'Actions' button (or right-click on one of the selected user rows). Monitored users have a "Yes" in the 'Receive Failed Test Notifications?' column, so you can quickly filter on which technicians you're currently monitoring.

People tab – Monitoring technicians failed tests

Please note:

- If you are a manager/supervisor user, and you are monitoring one or more technicians in your organization or sub-orgs, and your own user profile is being moved to another organization in the StrataSync account, you may be unsubscribed from some or all email notifications if you new organization is part of a different org hierarchy and you are not given visibility back to the orgs where the monitored technicians reside – in this case any admin user moving your user profile will be provided the appropriate warning message.
- Similarly, if an admin user moves a technician user monitored by one or more supervisors/managers to a different organization, StrataSync will review the supervisor/manager visibility to the new organization and display a warning message "Moving this user may turn off emailed notifications for subscribed users" as necessary.

As an administrator user, for any given technician user (e.g. Tech ID 't4d1' in the screenshot below), you can view which supervisor/manager users are currently subscribed to monitor that technician (i.e. they have selected to receive failed test email notifications for that technician).

In the example below, while the admin user 'jdsu.demo1@jdsu.com' is not monitoring techician 't4d1', as the 'Fail test notification configured' value is "No" under 'Access and Visibility', the admin user can see that the manager 'michaelproctor@mac.com' has subscribed to monitor this technician (under the 'Subscribed Failed Test Notification Users' value).

User profile – Verifying failed tests notifications

Failed test email notification example

The following screenshot shows an example email notification for the JSON REPORT. OTDR test type configured in the System Settings, from a monitored technician. It contains the configured email subject "Tech follow-up:failed test uploaded", the test results file is attached and a link is also provided to the test results file on the StrataSync account.

Please note that if email attachments are enabled:

- But the user receiving the email notification does not have the 'View Test Data File' permission, there will be no attachments for the email, and additionally the note "Attachments not included because you do not have 'View Test Data File' permission. Please contact your system administrator." will be in the email body.
- But the size of the attachments exceeds 10MB, then only attachments which don't exceed this limit will be attached and subsequent files will not be attached. Instead, links to the missing test results files will be included in the 'URL' section of the Meta-data table even if the 'Include link to failed test record(s)' is not checked in System Settings. Additionally, the note "Total attachments size of 10 MB reached. Please refer to respective meta-data block for missing attachment information." will be in the email body.

Job template settings

Select **Job Template Settings** to bring up the Job Template Settings section.

This feature allows you to assign and modify job templates for the the entire account if configured for this capability.

When finished, click **Done**.

Note: This feature is dependent on the instrument and may not be available for all products.

Documents

Select **Documents** to bring up the Documents section.

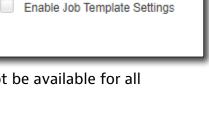

StrataSync supports centrally managing documents accessible via the VIAVI Mobile Tech app for accounts configured for this capability.

This is in addition to the VIAVI-provided instrument documentation.

Select **Documents** and a pop-up window shows the current documents uploaded. To upload a new document, select **Upload**.

Uploading documents via StrataSync

Once the document is uploaded, it is viewable along with other uploaded documents. You may edit the associated asset type and tags, but to change the name of the document, you must first delete it from StrataSync and then reupload it with a different name.

For technicians using the Mobile Tech application and logged into the customer account, if they select **Documentation** and then **Customer Documentation** as the category, they will then see documents uploaded to StrataSync organized by the 'Asset Type' selected when uploading to StrataSync.

Document list in the Mobile Tech app

Auto purge work order settings

Select **Auto Purge Work Order Settings** to bring up the Auto-purge section.

This feature allows support for monthly (runs on the 1st day of every calendar month) automatic purging (deletion) of workorders based on a number of months from each work order's schedule date. This feature applies to CDM 2.1 work orders only.

You can also select to delete only work orders which are in particular states, e.g. you may not want to delete work orders which are still in the "STARTED", "ASSIGNED" or "INPROGRESS" states. Finally you can select whether or not to delete any work orderassociated test results in addition to the work order.

This capability only works for the 'viaviJob', 'fiberJob' and 'swissAssignment' job types.

Select Enable Auto Purge Work Orders and configure the settings.

When finished, click **Done**.

Select a preference:	Auto Purge WorkOrder Se	ttings
What's New
