Summary of StrataSync 18.6 changes

- General improvements / Bug fixes
- Supported browsers

General improvements / Bug fixes

- Improvements and bug fixes related to TPA detailed and summary reports:
 - Bug fix to detailed PDF report sorting where test order could be out of order from the job test order.
 - Improvements to detailed PDF concatenated report specific to only OTDR and FCOMP test types and for when multiple wavelengths are tested:
 - PDF from SOR is the priority and will be included if both SOR and MSOR are saved. MSOR PDF will be used if only file present for that test location.
 - If multiple PDFs for each SOR wavelength are saved, then each will be included.
 - The last/most recent saved and uploaded PDF (whether SOR or MSOR) will be included if there are multiple saved tests.
 - Improvements to TPA summary report generation time for higher count jobs.
Note that a future StrataSync release will include an 'In Queue' report status in TPA job manager table.
 - Note that the TPA detailed PDF report concatenates any test results uploaded from VIAVI test instruments associated with the approved job which are PDF-formatted. Test results in other formats are not included.
- Bug fix impacting browser locale and ability to filter/sort in TPA job manager

Supported browsers

StrataSync supports the following browsers. VIAVI recommends the latest browser versions:

- Chrome
- Firefox
- Microsoft Edge
